A New Theory of Mind James A. Wise, 2016-05-11 This book presents a unique and intuitively compelling way of understanding how humans think It argues that narratives are the natural mode of thinking that the urge to think narratively reflects known neurological processes and that although narrative thinking is a product of evolution it enables us to transcend our evolutionary limits and actively shape our own futures In remarkably engaging language the authors describe how the currency of neural activity in the brain is transformed into the qualitatively different currency of conscious experience the everyday purposeful story like experience with which we all are familiar The book then examines the nature of thought and how it leads to purposeful action discussing among other concerns how memories about the past perceptions about the present and expectations about the future are structured as plausible coherent narratives by causation purpose and time and how errors are introduced into one's narratives both naturally and by other people often intentionally and how those errors bias one's expectations about the future and the actions taken or not taken as a consequence Each of these discussions is followed by a commentary that ties them to interesting facts and questions from throughout the physical and social sciences The book is concluded with the argument that narrative thought is what is meant when one uses the word
