Digital Image Processing and Analysis Scott E Umbaugh, 2017-11-30 Digital image processing and analysis is a field that continues to experience rapid growth with applications in many facets of our lives. Areas such as medicine, agriculture, manufacturing, transportation, communication systems, and space exploration are just a few of the application areas. This book takes an engineering approach to image processing and analysis, including more examples and images throughout the text than the previous edition. It provides more material for illustrating the concepts along with new PowerPoint slides. The application development has been expanded and updated, and the related chapter provides step-by-step tutorial examples for this type of development. The new edition also includes supplementary exercises as well as MATLAB-based exercises to aid both the reader and student in development of their skills.

Remote Sensing and Digital Image Processing with R - Lab Manual Marcelo de Carvalho Alves, Luciana Sanches, 2023-06-30 This Lab Manual is a companion to the textbook *Remote Sensing and Digital Image Processing with R*. It covers examples of natural resource data analysis applications, including numerous practical problem-solving exercises and case studies that use the free and open-source platform R. The intuitive structural workflow helps students better understand a scientific approach to each case study in the book and learn how to replicate, transplant, and expand the workflow for further exploration with new data models and areas of interest. Features: Aims to expand theoretical approaches of remote sensing and digital image processing through multidisciplinary applications using R and R packages. Engages students in learning theory through hands-on real-life projects. All chapters are structured with solved exercises and homework and encourage readers to understand the potential and the limitations of the environments. Covers data analysis in the free and open-source R platform, which makes remote sensing accessible to anyone with a computer. Explores current trends and developments in remote sensing in homework assignments with data to further explore the use of free multispectral remote sensing data, including very high spatial resolution information. Undergraduate and graduate-level students will benefit from the exercises in this Lab Manual because they are applicable to a variety of subjects, including environmental science, agriculture, engineering, as well as natural and social sciences. Students will gain a deeper understanding and first-hand experience with remote sensing and digital processing with a learn-by-doing methodology using applicable examples in natural resources.
