Visualizing the Text Lauren Beck, Christina Ionescu, 2017-06-01 This volume presents in depth and contextualized analyses of a wealth of visual materials These documents provide viewers with a mesmerizing and informative glimpse into how the early modern world was interpreted by image makers and presented to viewers during a period that spans from manuscript culture to the age of caricature The premise of this

collection responds to a fundamental question how are early modern texts objects and systems of knowledge imaged and consumed through bimodal hybrid or intermedial products that rely on both words and pictures to convey meaning The twelve contributors to this collection go beyond traditional lines of inquiry into word and image interaction to deconstruct visual dynamics and politics to show how images were shaped manipulated displayed and distributed to represent the material world to propagate official and commercial messages to support religious practice and ideology or to embody relations of power These chapters are anchored in various theoretical and disciplinary points of departure such as the history of collections and collecting literary theory and criticism the histories of science art history and visual culture word and image studies as well as print culture and book illustration Authors draw upon a wide range of visual material hitherto insufficiently explored and placed in context in some cases hidden in museums and archives or previously assessed only from a disciplinary standpoint that favored either the image or the text but not both in relation to each other They include manuscript illuminations representing compilers and collections frontispieces and other accompanying plates published in catalogues and museographies astronomical diagrams mixed pictographic alphabetic accounting documents Spanish baroque paintings illustrative frontispieces or series inspired by or designed for single novels or anthologies anatomical drawings featured in encyclopedic publications visual patterns of volcanic formations engravings representing the New World that accompany non fictional travelogues commonplace books that interlace text and images and graphic satire Geographically the collection covers imperial centers Great Britain France the Netherlands and Spain as well as their colonial periphery New France Mexico Central America South America in particular Brazil parts of Africa and the island of Ceylon Emblematic and thought provoking these images are only fragments of the multifaceted and comprehensive visual mosaic created during the early modern period but their consideration has far reaching implications
