SEE Change Sandra Waddock, Malcolm McIntosh, 2017-09-08 The return to business as usual after the economic earthquake that rocked financial markets, wrecked banks, and brought to light the grotesque distortions of casino capitalism on people and planet must be resisted. A new form of capitalism is both necessary and possible as some forward thinking political, business, and civil society leaders have now recognised. This book is about the myriad problems that we face and the systemic changes that are necessary for all enterprises in whatever sector and however constituted to operate within sustainable limits, to lower their ecological footprint, to enhance social equity, and to develop a sense of futurity. Waddock and McIntosh argue that enterprise innovation and creativity, like conversation, caring, and sharing, are part of what it means to be human. They argue that we need to redefine our relationship with commerce to reconcile our relationship with the Earth. The authors see the seeds of economic change in new and fundamentally different forms in entrepreneurship, networks, governance, transparency, and accountability already being planted and beginning to grow. To nurture these developments, they believe that we need to learn to see in new ways, to begin to recognise their worth, and to create a sufficiently broad, coherent, and integrated social movement for change that can overcome the momentum of the current system. Incremental change, CSR, for example, will not be enough. Deep change is needed in the purposing, goals, and practice of business enterprise. Deep change is needed in the ways that we as humans relate to nature and natural systems under severe stress from resource overuse and depletion, a quadrupled population during the 20th century, and human impact on climate. And deep change is needed in the ways in which we relate to each other, use our time, and build our communities. This book documents some of the changes that are already in progress and provides optimism that a sustainable enterprise economy, geared to innovation, creativity, problem solving, entrepreneurialism, and enthusiasm for life, can produce wealth, preserve the natural environment, and nurture social capital.

Drawing on the expertise of educationalists around the world, the book articulates key debates and theoretical perspectives which can give both students and staff across several courses within the study of education a framework for discussing and analysing how economics defines and shapes the nature and purposes of education. The chapters offer discussions and reflections on key issues including the historical developments that led to the creation of a formal education system in England and Wales, the ways in which neoliberalism underpins education, including the coercion of education to serve economic needs, the economics of the university as an institution. Addressing philosophical, sociological, historical, psychological and social issues in education and encouraging readers to pose questions about the nature of education, this book is a valuable resource for students and staff alike and will allow them to broaden perspectives on what education could be for and what it should be for.
