Concept Narrative

The Anthropocene is the name for new geologic epoch, one that is defined by the changes made by human activity. Because there are so many humans living on Earth using a great amount of the planet's resources, humans are disrupting huge geologic cycles like the water, carbon and nitrogen cycle. As a result, there have been major changes made to the land, air and water of the planet. These changes can affect the health of a great many ecosystems, which are biological communities composed of interacting organisms and their physical environments. Similarly, biomes, which are much bigger than ecosystems, are being affected by human activity.

Food webs are demonstrations of how organisms, producers, consumers, and decomposers, are related within a particular ecosystem. Producers are known as autotrophs since they are able to make organic molecules from inorganic molecules using energy from the sun. For this reason, all

Investigating Complex Phenomena: Bridging between Systems Thinking and Modeling in Science Education Tom Bielik,Moritz Krell,Laura Zangori,Orit Ben Zvi Assaraf,2023-11-15 Understanding the complexity of the natural world and making sense of phenomena is one of the main goals of science and science education When investigating complex phenomena such as climate change or pandemic outbreaks students are expected to engage in systems thinking by considering the boundaries of the investigated system identifying the relevant components and their interactions and exploring system attributes such as hierarchical organization dynamicity feedback loops and emergence Scientific models are tools that support students reasoning and understanding of complex systems and students are expected to develop their modeling competence and to engage in the modeling process by constructing testing revising and using models to explain and predict phenomena Computational modeling tools for example provide students with the opportunity to explore big data run simulations and investigate complex systems Therefore both systems thinking and modeling approaches are important for science education when investigating complex phenomena

Fostering Understanding of Complex Systems in Biology

Education Orit Ben Zvi Assaraf, Marie-Christine P. J. Knippels, 2022-05-25 This book synthesizes a wealth of international research on the critical topic of fostering understanding of complex systems in biology education. Complex systems are prevalent in many scientific fields and at all scales from the micro scale of a single cell or molecule to complex systems at the macro scale such as ecosystems. Understanding the complexity of natural systems can be extremely challenging though crucial for an adequate understanding of what they are and how they work. The term systems thinking has become synonymous with developing a coherent understanding of complex biological processes and phenomena. For researchers and educators alike, understanding how students' systems thinking develops is an essential prerequisite to develop and maintain pedagogical scaffolding that facilitates students' ability to fully understand the system's complexity. To that end, this book provides researchers and teachers with key insights from the current research community on how to support learners' systems thinking in secondary and higher education. Each chapter in the book elaborates on different theoretical and methodological frameworks pertaining to complexity in biology education, and a variety of biological topics are included from genetics, photosynthesis and the carbon cycle to ecology and climate change. Specific attention is paid to design elements of computer-based learning environments to understand complexity in biology education.

Assessing Science Understanding

Joel J. Mintzes, James H. Wandersee, Joseph D. Novak, 2005-08-22 Recent government publications like Benchmarks for Scientific Literacy and Science for all Americans have given teachers a mandate for improving science education in America. What we know about how learners construct meaning particularly in the natural sciences has undergone a virtual revolution in the past 25 years. Teachers as well as researchers are now grappling with how to better teach science as well as how to assess whether students are learning. *Assessing Science Understanding* is a companion volume to *Teaching Science for Understanding* and explores how to assess whether learning has taken place. The book discusses a range of promising new and practical tools for assessment including concept maps, Vee diagrams, clinical interviews, problem sets, performance-based assessments, computer-based methods, visual and observational testing, portfolios, explanatory models, and national examinations.
