

What are the key components of TF-CBT?

01

TF-CBT is a components-based treatment model for traumatized children and their nonoffending caregivers. It includes psychoeducation, parenting skills enhancement, and introduction of coping strategies.

02

Emotional regulation and cognitive processing are crucial elements. Therapists teach relaxation techniques, affective expression, and cognitive restructuring to manage trauma-related thoughts and emotions.

03

Trauma narrative development and in vivo exposure are distinctive aspects of TF-CBT. Children create detailed accounts of their traumatic experiences and are gradually exposed to trauma reminders in a safe manner.
