Phytohormones: A Window to Metabolism, Signaling and Biotechnological Applications Lam-Son Phan Tran, Sikander Pal, 2014-04-01

Abiotic and biotic stresses adversely affect plant growth and productivity. The phytohormones regulate key physiological events under normal and stressful conditions for plant development. Accumulative research efforts have discovered important roles of phytohormones and their interactions in regulation of plant adaptation to numerous stressors. Intensive molecular studies have elucidated various plant hormonal pathways, each of which consists of many signaling components that link a specific hormone perception to the regulation of downstream genes. Signal transduction pathways of auxin, abscisic acid, cytokinins, gibberellins, and ethylene have been thoroughly investigated. More recently, emerging signaling pathways of brassinosteroids, jasmonates, salicylic acid, and strigolactones offer an exciting gateway for understanding their multiple roles in plant physiological processes. At the molecular level, phytohormonal crosstalks can be antagonistic, synergistic, or additive in actions. Additionally, the signal transduction components of one hormonal pathway may interplay with the signaling components of other hormonal pathways. Together, these and other research findings have revolutionized the concept of phytohormonal studies in plants. Importantly, genetic engineering now enables plant biologists to manipulate the signaling pathways of plant hormones for development of crop varieties with improved yield and stress tolerance. This book, written by internationally recognized scholars from various countries, represents the state of the art understanding of plant hormones, biology, signal transduction, and implications. Aimed at a wide range of readers, including

researchers students teachers and many others who have interests in this flourishing research field every section is concluded with biotechnological strategies to modulate hormone contents or signal transduction pathways and crosstalk that enable us to develop crops in a sustainable manner Given the important physiological implications of plant hormones in stressful environments our book is finalized with chapters on phytohormonal crosstalks under abiotic and biotic stresses

Systems Biology of Transcription Regulation Ekaterina Shelest, Edgar Wingender, Joerg Linde, 2016-09-09 Transcription regulation is a complex process that can be considered and investigated from different perspectives Traditionally and due to technical reasons including the evolution of our understanding of the underlying processes the main focus of the research was made on the regulation of expression through transcription factors TFs the proteins directly binding to DNA On the other hand intensive research is going on in the field of chromatin structure remodeling and its involvement in the regulation Whatever direction we select we can speak about several levels of regulation For instance concentrating on TFs we should consider multiple regulatory layers starting with signaling pathways and ending up with the TF binding sites in the promoters and other regulatory regions However it is obvious that the TF regulation also including the upstream processes represents a modest portion of all processes leading to gene expression For more comprehensive description of the gene regulation we need a systematic and holistic view which brings us to the importance of systems biology approaches Advances in methodology especially in high throughput methods result in an ever growing mass of data which in many cases is still waiting for appropriate consideration Moreover the accumulation of data is going faster than the development of algorithms for their systematic evaluation Data and methods integration is indispensable for the acquiring a systematic as well as a systemic view In addition to the huge amount of molecular or genetic components of a biological system the even larger number of their interactions constitutes the enormous complexity

of processes occurring in a living cell organ organism In systems biology these interactions are represented by networks Transcriptional or more generally gene regulatory networks are being generated from experimental ChIPseq data by reverse engineering from transcriptomics data or from computational predictions of transcription factor TF target gene relations While transcriptional networks are now available for many biological systems mathematical models to simulate their dynamic behavior have been successfully developed for metabolic and to some extent for signaling networks but relatively rarely for gene regulatory networks Systems biology approaches provide new perspectives that raise new questions Some of them address methodological problems others arise from the newly obtained understanding of the data These open questions and problems are also a subject of this Research Topic Revolutionizing the Interaction between State and Citizens through Digital Communications Edwards III, Sam B.,Santos, Diogo,2014-07-31 Networked communication technologies have drastically changed the relationship between States and their citizens This fundamental shift has eased civilians ability to access information and organize groups like never before creating the need to re examine existing theories Revolutionizing the Interaction between State and Citizens through Digital Communications evaluates the relationship between governments and their constituents and how this relationship is impacted by emerging technologies Discussing both developed and underdeveloped nations this book provides a comparison for the ongoing shift in societies serving as a critical reference for legal professionals activists government employees academics and students *Cognitive Linguistics and Sociocultural Theory* Kyoko Masuda,Carlee Arnett,Angela Labarca,2015-10-16 By integrating cognitive linguistics and sociocultural theories this groundbreaking book presents empirical studies on selected grammatical and semantic aspects that are challenging for second foreign language learners Through in depth studies exploring eight different languages this book offers insights generated through the synergy between cognitive linguistics and sociocultural theories that can be readily incorporated into teaching **Multilevel governance, carbon management and land-use decisions in Tanzania** Kijazi, M.,Joel, J.I.,Larson, A.M.,Cisneros, N.,2017-06-05 Who makes land use decisions how are those decisions made and who influences whom how and why This working paper is part of a series based on research studying multilevel decision making institutions and processes The series is aimed at providing insight into why efforts to keep forests standing such as initiatives like Reducing Emissions from Deforestation and Forest Degradation REDD are still so far from altering development trajectories It underlines the importance of understanding the politics of multilevel governance in forest land and climate policy and practice and identifies potential ways forward while highlighting the role of conservation and sustainable management of forests for the enhancement of forest carbon stocks in developing countries **Stress Tolerance in Horticultural Crops** Ajay Kumar,Avinash Chandra Rai,Ashutosh Rai,Krishna Kumar Rai,Ved Prakash Rai,2021-05-14 Stress Tolerance in Horticultural Crops Challenges and Mitigation Strategies explores concepts strategies and recent advancements in the area of abiotic stress tolerance in horticultural crops highlighting the latest advances in molecular breeding genome

Limiting Base Erosion Erik Pinetz, Erich Schaffer, 2017-08-30 Limiting base erosion from different viewpoints Hybrid mismatch arrangements CFC rules transfer pricing rules Limiting Base Erosion the general topic for the master theses of the part time LL M program 2015 2017 has been one of the most controversial topics in international tax law ever since the initiation of the OECD BEPS Project in 2013 Even though the final reports of the 15 BEPS Actions were released by the OECD in as early as October 2015 the question how to effectively target base erosion practices still has not lost any of its topicality Following the efforts of the OECD in developing a new international tax environment the focus of attention has now partly shifted to the OECD Member countries that have to properly implement the OECD recommendations in their domestic laws as well as in their tax treaty practice In this respect a comprehensive analysis in the literature of all the issues related to base erosion

proves to be of the utmost importance in order to provide practical guidance to the Member countries during that the process of implementation This book deals especially with four key areas of interest Limiting base erosion by neutralizing the effects of hybrid mismatch arrangements Limiting base erosion by strengthening CFC rules Measures against base erosion via interest deductions and other financial payments Limiting base erosion by improving transfer pricing rules On that basis 27 concrete topics were chosen in order to address the four key areas of interest from different viewpoints Base erosion and the challenges they present read more in Limiting Base Erosion
