Legal Protection of Genetic Resources and Traditional Knowledge from a Social Network Perspective Elnur Karimov, 2025-12-09 This book explores the urgent and evolving legal challenges surrounding the use of genetic resources and traditional knowledge TK particularly those held by Indigenous Peoples and local communities International frameworks like the Nagoya Protocol and the 2024 WIPO Treaty aim to regulate benefit sharing but legal enforcement remains weak This book argues that traditional legal approaches both international and national alone are no longer sufficient and proposes a network focused enforcement and compensation mechanism that uses social network analysis to examine the flow of genetic materials and TK through national and global supply chains This approach is applied to 30 real world biopiracy case studies across diverse regions including Asia Latin America and Africa to identify legal blind spots and power asymmetries The book explains how predicting central nodes within supply chains where biopiracy and misappropriation are most likely to occur can lead to better enforcement and compensation outcomes It then concludes with policy recommendations and suggestions to design more robust protection mechanisms for genetic resources and the associated TK This book will interest scholars of intellectual property and biotechnology law as well as scholars of indigenous studies Policymakers indigenous activists and social scientists who are interested in the broader applications of social network analysis will also find this of note

This most unusual book looks at the newfound obsession driving people of all classes countries and age groups the asocial networking a must do mode of entry into a new social order If not adopted and mastered quickly will it cause us to miss out on one of the greatest forms of modern human experience It is also interesting and ironical to see ourselves socializing with the help of gadgets when we could actually step forward and socialize with the person standing next to us For the benefit of those who exhibit their social lives online this book offers little tricks of the trade to master the art of networking and garner tangible gains in the real world The author discusses our vulnerabilities and weaknesses which are often reflected in the way we socialize on the web Some people have however mastered the art of masking their inhibitions has this made them desirable and irresistible in both the electronic and real worlds The ephemeral nature of our fantasy of socializing online also poses the danger of obsolescence to the current rulers of social networking while presenting an open window of opportunity to any innovative and enterprising entrepreneur who can better our societal experiences The author attempts to look into the future of mankind and its changing priorities through the future of social networking The reader is taken on a mind boggling and nerve crackling tour of the virtual world of networking stopping only to expose the vulnerability of the human mind

Social Interaction in Animals: Linking Experimental Approach and Social Network Analysis Cédric Sueur, Frédéric Mery, 2017-03-14 Understanding the link between individual behaviour and population organization and functioning has long been central to ecology and evolutionary biology Behaviour is a response to intrinsic and extrinsic factors including individual state ecological factors or social interactions Within a group each individual can be seen as part of a network of social interactions varying in strength type and dynamic The structure of this network can deeply impact the ecology and evolution of individuals populations and species Within a group social interactions can take many forms and may significantly affect an individual's fitness These interactions may result in complex systems at the group level such as in the case of collective decisions to migrate to build nest or to forage Among them social transmission of information has been studied mostly in vertebrates fish birds and mammals including humans In insects social learning has been unambiguously demonstrated in social Hymenoptera but this probably reflects limited research effort and recent evidence show that even non eusocial insects such as *Drosophila* cockroaches and crickets can copy the behaviour of others Compared to individual learning which requires a trial and error period every generation social learning can potentially result in the stable transmission of behaviours across generations leading to cultural traditions in some species The study of the processes which may facilitate or prevent this transmission and the analyses of the relationship between social network structure and efficiency of social transmission became these recent years an emerging and promising field of research The goal of this research topic is to present the genetic and socio environmental factors affecting social interaction and information or pathogen transmission with the integration of experimental approaches social network analyses and modelling Importantly we aim to understand whether a relationship between social network structures and dynamics can reflect the efficiency of social transmission i.e. can we use social network analysis to predict the social transmission of information or of pathogen collective decision making and ultimately the evolutionary trajectory of a group
