Navigating Through Problem Solving and Reasoning in Grade 6 Denisse Rubilee Thompson, 2009 Problem solving and reasoning are students' processes of actively applying what they know to new problems from diverse areas of mathematics. Knowing a variety of mathematical ideas is insufficient unless students can draw on, integrate, and use them to solve challenging complex problems. The *Navigating through Problem Solving and Reasoning* books for grades 3-6 present hands-on investigations that nurture reasoning and problem-solving strategies in each of the upper elementary grades. In lively and challenging investigations, grade 6 students have opportunities to reason about parts of a whole, analyse patterns of growth, discover area formulas for familiar shapes, explore scale factors and similar figures, and analyse a set of data to solve a real-world problem: how to arrange competitors in teams for an athletic festival. Students apply mathematical ideas from the five main content areas: number, algebra, geometry, measurement, and data analysis. As they work, they infer, generalise, reason by analogy, recognise relationships, and make representations, and they also predict, check, and revise, and verify their results. Includes a supplemental CD-ROM that features applets for students' use and resources for teachers' professional development.
