Problem

Polar bears are extremely good swimmers and can travel as long as 10 hours without resting. If a polar bear is swimming with an average speed of 2.6 m/s, how far will it have traveled after 10.0 hours?

Solution

Step 1: List the given and the unknown values.

Given: speed, $v = 2.6 \text{ m/s}$

time, $t = 10.0 \text{ h} = 10.0 \text{ h} \times 3600 \text{ s/h} = 3.6 \times 10^4 \text{ s}$

Unknown: distance, $d = ? \text{ m}$

Step 2: Rearrange the speed equation to solve for distance.

$$\text{speed} = \frac{\text{distance}}{\text{time}} \qquad v = \frac{d}{t}$$

$$d = vt$$

Step 3: Insert the known values into the equation, and solve.

$$d = \frac{2.6 \text{ m}}{\text{s}} \times (3.6 \times 10^4 \text{ s})$$

$$d = 9.4 \times 10^4 \text{ m} = 94 \text{ km}$$

Practice

1. Suppose the polar bear were running on land instead of swimming. If the polar bear runs at a speed of about 8.3 m/s, how far will it travel in 10.0 hours?

2. Like the polar bear, the walrus is a fine swimmer, though it does not have the same endurance. For short periods of time, a walrus can swim with an average speed of 9.7 m/s. How far would a walrus swim at this speed in 3.4 minutes?

3. The maximum posted speed limit on the U.S. Interstate Highway System may be found in rural areas of several western states. This maximum speed is _____

Cognitive Development and Individual Variability Anik De Ribaupierre, Thierry Lecerf, 2019-07-01 The standard approach

to cognitive development most frequently consists of cross sectional studies comparing different ages and groups while restricted to a single task The necessity to focus on the individual in an idiographic perspective rather than on the task or the variable has been repeatedly emphasized most recently in several very important papers by Nesselroade and Molenaar Variability has also emerged as a crucial characteristic Moreover understanding the developmental construction of a given cognitive achievement is imperative to understanding cognitive functioning in adulthood The general objective of this book is to focus on the individual by studying intraindividual and interindividual variability in various cognitive tasks that is intraindividual variability across items of a given task inconsistency across various cognitive tasks dispersion and or across years intraindividual change and of course on interindividual differences in intraindividual variability This book presents empirical studies that have been conducted by research groups in Europe and in North America prominent in the field of variability and development or methodology The 26 authors co authors include senior authors such as Lautrey Schmiedek Dauvier van der Maas Ghisletta Stawski MacDonald and de Ribaupierre *Resources in Education* ,1993-10 Cutnell & Johnson Physics John D.
