Section: Cell Membrane

Read the passage below. Then answer the questions that follow.

A cell membrane is made of a double layer of **phospholipid** molecules. Each layer is a mirror image of the other layer. The structure is called a **lipid bilayer**.

Located within the lipid bilayer of the cell membrane are proteins of different types. Each type of membrane protein plays a vital role in the life of a cell. Cell-surface markers are membrane proteins that are attached to a carbohydrate on the cell's surface. Together, the protein and carbohydrate help other cells recognize the cell type—liver cell or heart cell, for example. Receptor proteins are membrane proteins that recognize and bind to specific substances outside the cell. When this happens, the inside of the cell changes, as well. In this way, receptor proteins help cells detect and change in response to things in the environment outside the cell. Enzymes are proteins that change the rate of chemical reactions. Various enzymes in the cell membrane are involved in important biochemical reactions inside the cell. Many substances needed inside the cell cannot pass through the cell membrane on their own. Transport proteins are membrane proteins that aid the movement of these substances through the lipid bilayer of the cell membrane. In this way, transport proteins help carry a variety of substances into and out of the cell.

SKILL: USING CONTEXT CLUES

Read each question, and write your answer in the space provided.

1. The prefix *bi-* means “two.” Why is the term *lipid bilayer* a good name for a cell membrane?

2. Why are the proteins described in the second paragraph classified together in a group referred to as membrane proteins?

Now go deeper. This workbook transforms Al Sweigart's best-selling guide from a reading experience into a coding experience. Following Automate the Boring Stuff with Python chapter by chapter, this workbook will help you turn concepts into muscle memory through carefully designed exercises, projects, and real Python scripts. Every concept from Automate is reinforced through carefully sequenced questions, exercises, and projects that help you think like a programmer and prove to yourself that you really get it. At the end of each chapter, you'll tackle miniprojects that bring everything together. Whether you're renaming files, scraping websites, converting text to speech, modifying spreadsheets, or sending emails, you'll build scripts that do real work. Fun projects like image generators and word games are in the mix, too, not just boring stuff. Every question and project come with a solution at the back of the book, so you're never stuck. Inside, you'll find fill-in-the-blank and short-answer questions that reinforce key concepts. Targeted exercises build fluency with variables, loops, functions, regular expressions, and more. Real Python scripts to run, tweak, and debug. Projects that automate common tasks like organizing files, backing up data, and scheduling programs. Full working code for every project, so you can check your work and learn by example. With over 500,000 copies sold worldwide, Automate the Boring Stuff with Python has become the go-to guide for learning Python. This workbook gives you the structure, feedback, and smart reinforcement to go from reading code to writing it with confidence. *Chapter Resource*
