and implementation of high performance architecture software tools and algorithms for surface rendering **3d virtual histology of neuronal tissue by propagation-based x-ray phase-contrast tomography** Mareike Töpperwien,2018

Deciphering the three dimensional 3d cytoarchitecture of neuronal tissue is an important step towards understanding the connection between tissue function and structure and determining relevant changes in neurodegenerative diseases The gold standard in pathology is histology in which the tissue is examined under a light microscope after serial sectioning and subsequent staining It is an invasive and labor intensive technique which is prone to artifacts due to the slicing procedure While it provides excellent results on the 2d slices the 3d anatomy can only be determined after aligning the individual sections leading to a non isotropic resolution within the tissue X ray computed tomography CT offers a promising alternative due to its potential resolution and large penetration depth which allows for non invasive imaging of the sample s 3d density distribution In classical CT contrast formation is based on absorption of the x rays as they pass through the sample However weakly absorbing samples like soft tissue from the central nervous system give nearly no contrast By exploiting the much stronger phase shifts for contrast formation which the sample induces in a partially coherent wavefront it can be substantially increased During free space propagation behind the sample these phase shifts are converted to a measurable intensity image by interference of the disturbed wave fronts In this thesis 3d virtual histology is performed by means of propagation based x ray phase contrast tomography on tissue from the central nervous system of humans and mice A combination of synchrotron based and laboratory setups is used to visualize the 3d density distribution on varying lengths scales from the whole organ down to single cells By comparing and optimizing different preparation techniques and phase retrieval approaches even sub cellular resolution can be reached in mm sized tissue blocks The development of an automatic cell segmentation workflow provides access to the 3d cellular distribution within the tissue enabling the quantification of the cellular arrangement and allowing for extensive statistical analysis based on several thousands to millions of cells This paves the way for biomedical studies aimed at changes in cellular distribution e g in the course of neurodegenerative diseases such as multiple sclerosis Alzheimer s disease or ischemic stroke *Textbook of Laparoscopic Urology* Inderbir S. Gill,2006-10-03 Divided into eleven detailed sections this reference displays the expertise and research of specialists from leading urology centers around the world and offers authoritative chapters on the entire spectrum of urologic laparoscopy The chapters cover methods in patient selection peri operative management and complication avoidance step by step Information Technologies in Biomedicine Ewa Pietka,Jacek Kawa,2010-05-29 Information Technology in Biomedicine is an interdisciplinary research area that bridges the gap between tethodological achievements in engineering and clinical requirements in medical diagnosis and therapy In this book members of the academic society of technical and medical background present their research results and clinical implementation in order to satisfy the functional requirements of authorized physicians for the benefit of the patients An extended area is covered by the articles It includes biomedical signals

medical image processing computer aided diagnosis and surgery biometrics healthcare and telemedicine biomechanics biomaterials bioinformatics Section on bronchoscopy presents the basis as well as new research studies performed in this field Papers present various theoretical approaches and new methodologies based on fuzzy sets mathematical statistics mathematical morphology fractals wavelets syntactic methods artificial neural networks graphs and many others

Computer-Aided Design of Analog Integrated Circuits and Systems Rob A. Rutenbar, Georges G. E.

Gielen, 2002-05-06 The tools and techniques you need to break the analog design bottleneck Ten years ago analog seemed to be a dead end technology Today System on Chip SoC designs are increasingly mixed signal designs With the advent of application specific integrated circuits ASIC technologies that can integrate both analog and digital functions on a single chip analog has become more crucial than ever to the design process Today designers are moving beyond hand crafted one transistor at a time methods They are using new circuit and physical synthesis tools to design practical analog circuits new modeling and analysis tools to allow rapid exploration of system level alternatives and new simulation tools to provide accurate answers for analog circuit behaviors and interactions that were considered impossible to handle only a few years ago To give circuit designers and CAD professionals a better understanding of the history and the current state of the art in the field this volume collects in one place the essential set of analog CAD papers that form the foundation of today's new analog design automation tools Areas covered are Analog synthesis Symbolic analysis Analog layout Analog modeling and analysis Specialized analog simulation Circuit centering and yield optimization Circuit testing Computer Aided Design of Analog Integrated Circuits and Systems is the cutting edge reference that will be an invaluable resource for every semiconductor circuit designer and CAD professional who hopes to break the analog design bottleneck
