Bhatia,2020-08-25 The book Intelligent Systems and Applications Proceedings of the 2020 Intelligent Systems Conference is a remarkable collection of chapters covering a wider range of topics in areas of intelligent systems and artificial intelligence and their applications to the real world The Conference attracted a total of 545 submissions from many academic pioneering researchers scientists industrial engineers students from all around the world These submissions underwent a double blind peer review process Of those 545 submissions 177 submissions have been selected to be included in these proceedings As intelligent systems continue to replace and sometimes outperform human intelligence in decision making processes they have enabled a larger number of problems to be tackled more effectively This branching out of computational intelligence in several directions and use of intelligent systems in everyday applications have created the need for such an international conference which serves as a venue to report on up to the minute innovations and developments This book collects both theory and application based chapters on all aspects of artificial intelligence from classical to intelligent scope We hope that readers find the volume interesting and valuable it provides the state of the art intelligent methods and techniques for solving real world problems along with a vision of the future research The Frankencamera Eino-Ville Aleksi Talvala,2011 Digital cameras both in traditional form factors and as parts of cell phones have become ubiquitous over the last decade But for the most part they remain black boxes to the end user and cannot be reprogrammed or modified This has become an obstacle to researchers in the new field of computational photography who want to use the growing computing power of digital cameras to create images no traditional camera could produce This dissertation presents the Frankencamera platform a digital camera system designed for computational photography The Frankencamera is a fully open fully programmable digital camera which can be easily modified to test out new research ideas The Frankencamera architecture allows for per frame control of the capture process and accurate synchronization of all the components that make up the camera Based on this architecture this dissertation details two hardware platforms the F2 a flexible custom built camera and the Nokia N900 a commercial smartphone Both platforms can be easily programmed at a high level using the FCam API written to embody the Frankencamera architecture Finally this dissertation presents several sample applications for the Frankencamera platform

Several of these applications could not have been developed for any existing camera platform and the ease and speed at which they were written show that the Frankencamera platform is a compelling tool for computational photography

DESIGN & DEVELOPMENT OF ROBOTIC ARM REMOTE CONTROLLED THROUGH A TCP/IP NETWORK

Devashi Tandon, Kumar Vishal, 2018-03-26 Robotic Engineering has evolved significantly over the past fifteen years. With the help of AI, robots can perform many complicated tasks which were left best to humans earlier. This book does not deal with advanced robotics. However, it is a very good starting guide for learning the engineering behind building a robotic arm from scratch. It begins by illustrating the basic theories behind a traditional robotic arm and gives a systematic process of building a robotic arm broken down into different phases of the project. It is also a good guide on how to build a professional software for managing the arm and how to remotely control it through a computer which is geographically placed at another location than the arm itself. Since the book was developed from an actual project at IIT Roorkee which won the Institute Medal in 2003.

Smart Cameras Ahmed Nabil Belbachir, 2009-10-20 A smart camera is an integrated machine vision system which in addition to image capture circuitry includes a processor which can extract information from images without need for an external processing unit and interface devices used to make results available to other devices. This book provides content on smart cameras for an interdisciplinary audience of professionals and students in embedded systems, image processing, and camera technology. It serves as a self-contained single source reference for material otherwise found only in sources such as conference proceedings, journal articles, or product data sheets. Coverage includes the 50-year chronology of smart cameras, their technical evolution, the state of the art, and numerous applications such as surveillance and monitoring, robotics, and transportation.

Visual Event Computing, *Language, Vision, and Music* Paul Mc Kevitt, Seán Ó Nualláin, Conn Mulvihill, 2002-01-01. Language, vision, and music: what common cognitive patterns underlie our competence in these disparate modes of thought? Language, natural formal vision, and music seem to share at least the following attributes: a hierarchical organisation of constituents; recursivity; metaphor; the possibility of self-reference; ambiguity; and systematicity. Can we propose the existence of a general symbol system with instantiations in these three modes, or is the only commonality to be found at the level of such entities as cerebral columnar automata? Answers are to be found in this international collection of work which recognises that one of the basic features of consciousness is its MultiModality: that there are possibilities to model this with contemporary technology, and that cross-cultural commonalities in the experience of, and creativity within, the various modalities are significant. With the advent of Intelligent MultiMedia, this aspect of consciousness implementation in mind/brain acquires new significance.
