Gibbons,2006-05-12 Longitudinal data analysis for biomedical and behavioral sciences This innovative book sets forth and describes methods for the analysis of longitudinal data emphasizing applications to problems in the biomedical and behavioral sciences Reflecting the growing importance and use of longitudinal data across many areas of research the text is designed to help users of statistics better analyze and understand this type of data Much of the material from the book grew out of a course taught by Dr Hedeker on longitudinal data analysis The material is therefore thoroughly classroom tested and includes a number of features designed to help readers better understand and apply the material Statistical procedures featured within the text include Repeated measures analysis of variance Multivariate analysis of variance for repeated

measures Random effects regression models RRM Covariance pattern models Generalized estimating equations GEE models Generalizations of RRM and GEE for categorical outcomes Practical in their approach the authors emphasize the applications of the methods using real world examples for illustration Some syntax examples are provided although the authors do not generally focus on software in this book Several datasets and computer syntax examples are posted on this title's companion Web site The authors intend to keep the syntax examples current as new versions of the software programs emerge This text is designed for both undergraduate and graduate courses in longitudinal data analysis Instructors can take advantage of overheads and additional course materials available online for adopters Applied statisticians in biomedicine and the social sciences can also use the book as a convenient reference

Modern Experimental Design Thomas P. Ryan, 2006-12-22 A complete and well balanced introduction to modern experimental design Using current research and discussion of the topic along with clear applications Modern Experimental Design highlights the guiding role of statistical principles in experimental design construction This text can serve as both an applied introduction as well as a concise review of the essential types of experimental designs and their applications Topical coverage includes designs containing one or multiple factors designs with at least one blocking factor split unit designs and their variations as well as supersaturated and Plackett Burman designs In addition the text contains extensive treatment of Conditional effects analysis as a proposed general method of analysis Multiresponse optimization Space filling designs including Latin hypercube and uniform designs Restricted regions of operability and debarred observations Analysis of Means ANOM used to analyze data from various types of designs The application of available software including Design Expert JMP and MINITAB This text provides thorough coverage of the topic while also introducing the reader to new approaches Using a large number of references with detailed analyses of datasets Modern Experimental Design works as a well rounded learning tool for beginners as well as a valuable resource for practitioners
