View Dependent Character Animation:

View-Dependent Character Animation Parag Chaudhuri, Prem Kalra, Subhashis Banerjee, 2007-09-24 Computer generated 3D animation has matured over the years into a complex art form Coordinating and presenting the character's movement in three dimensions to convey a specific idea to the audience requires artistic and technical skills and often a labourious iterative trial and error process to get it right Creating moving camera character animations in 3D is a multi faceted computer graphics and computer vision problem Warranting a formal representation of the moving camera and efficient algorithms to help author the multitude of character poses required for the animation It is also necessary to deal with issues pertaining to camera and character pose interpolation and visualization of the association between the two The solution to this problem has to be efficient and elegant from the perspective of a computer scientist and make sense and be intuitive to use This well researched book contains a large number of example animations to explain and illustrate this versatile technique

The Impact of Applications on Mathematics Masato Wakayama, Robert S. Anderssen, Jin Cheng, Yasuhide Fukumoto, Robert McKibbin, Konrad Polthier, Tsuyoshi Takagi, Kim-Chuan Toh, 2014-07-18 This book is a collection of papers presented at the Forum The Impact of Applications on Mathematics in October 2013 It describes an appropriate framework in which to highlight how real world problems over the centuries and today have influenced and are influencing the development of mathematics and thereby how mathematics is reshaped in order to advance mathematics and its application The contents of this book address productive and successful interaction between industry and mathematicians as well as the cross fertilization and collaboration that result when mathematics is involved with the advancement of science and technology

Immersive Video Technologies Giuseppe Valenzise, Martin Alain, Emin Zerman, Cagri Ozcinar, 2022-09-29 Get a broad overview of the different modalities of immersive video technologies from omnidirectional video to light fields and volumetric video from a multimedia processing perspective From capture to representation coding and display video technologies have been evolving significantly and in many different directions over the last few decades with the ultimate goal of providing a truly immersive experience to users After setting up a common background for these technologies based on the plenoptic function theoretical concept Immersive Video Technologies offers a comprehensive overview of the leading technologies enabling visual immersion including omnidirectional 360 degrees video light fields and volumetric video Following the critical components of the typical content production and delivery pipeline the book presents acquisition representation coding rendering and quality assessment approaches for each immersive video modality The text also reviews current standardization efforts and explores new research directions With this book the reader will gain a broad understanding of immersive video technologies that use three different modalities omnidirectional video light fields and volumetric video b learn about the most recent scientific results in the field including the recent learning based methodologies and c understand the challenges and perspectives for immersive video technologies Describes the whole
