**Building Automated Trading Systems** Benjamin Van Vliet, 2007-03-07 Over the next few years the proprietary trading and hedge fund industries will migrate largely to automated trade selection and execution systems Indeed this is already happening While several finance books provide C code for pricing derivatives and performing numerical calculations none approaches the topic from a system design perspective This book will be divided into two sections programming techniques and automated trading system ATS technology and teach financial system design and development from the absolute ground up using Microsoft Visual C NET 2005 MS Visual C NET 2005 has been chosen as the implementation language primarily because most trading firms and large banks have developed and continue to develop their proprietary algorithms in ISO C and Visual C NET provides the greatest flexibility for incorporating these legacy algorithms into working systems Furthermore the NET Framework and development environment provide the best libraries and tools for rapid development of trading systems The first section of the book explains Visual C NET 2005 in detail and focuses on the required programming knowledge for automated trading system development including object oriented design delegates and events enumerations random number generation timing and timer objects and data management with STL NET and NET collections Furthermore since most legacy code and modeling code in the financial markets is done in ISO C this book looks in depth at several advanced topics relating to managed unmanaged COM memory management and interoperability Further this book provides dozens of examples illustrating the use of database connectivity

with ADO NET and an extensive treatment of SQL and FIX and XML FIXML Advanced programming topics such as threading sockets as well as using C NET to connect to Excel are also discussed at length and supported by examples The second section of the book explains technological concerns and design concepts for automated trading systems Specifically chapters are devoted to handling real time data feeds managing orders in the exchange order book position selection and risk management A dll is included in the book that will emulate connection to a widely used industry API Trading Technologies Inc s XTAPI and provide ways to test position and order management algorithms Design patterns are presented for market taking systems based upon technical analysis as well as for market making systems using intermarket spreads As all of the chapters revolve around computer programming for financial engineering and trading system development this book will educate traders financial engineers quantitative analysts students of quantitative finance and even experienced programmers on technological issues that revolve around development of financial applications in a Microsoft environment and the construction and implementation of real time trading systems and tools Teaches financial system design and development from the ground up using Microsoft Visual C NET 2005 Provides dozens of examples illustrating the programming approaches in the book Chapters are supported by screenshots equations sample Excel spreadsheets and programming code
