DESIGN & DEVELOPMENT OF ROBOTIC ARM REMOTE CONTROLLED THROUGH A TCP/IP NETWORK

Devashi Tandon, Kumar Vishal, 2018-03-26 Robotic Engineering has evolved significantly over the past fifteen years. With the help of AI, robots can perform many complicated tasks which were left best to humans earlier. This book does not deal with advanced robotics. However, it is a very good starting guide for learning the engineering behind building a robotic arm from scratch. It begins by illustrating the basic theories behind a traditional robotic arm and gives a systematic process of building a robotic arm broken down into different phases of the project. It is also a good guide on how to build a professional software for managing the arm and how to remotely control it through a computer which is geographically placed at another location than the arm itself. Since the book was developed from an actual project at IIT Roorkee which won the Institute Medal in 2003.

This book provides content on smart cameras for an interdisciplinary audience of professionals and students in embedded systems, image processing, and camera technology. It serves as a self-contained single source reference for material otherwise found only in sources such as conference proceedings, journal articles, or product data sheets. Coverage includes the 50-year chronology of smart cameras, their technical evolution, the state of the art, and numerous applications such as surveillance and monitoring, robotics, and transportation.

Visual Event Computing, *Language, Vision, and Music* Paul Mc Kevitt, Seán Ó Nualláin, Conn Mulvihill, 2002-01-01. Language, vision, and music: what common cognitive patterns underlie our competence in these disparate modes of thought? Language, natural formal vision, and music seem to share at least the following attributes: a hierarchical organisation of constituents; recursivity; metaphor; the possibility of self-reference; ambiguity; and systematicity. Can we propose the existence of a general symbol system with instantiations in these three modes, or is the only commonality to be found at the level of such entities as cerebral columnar automata? Answers are to be found in this international collection of work which recognises that one of the basic features of consciousness is its MultiModality: that there are possibilities to model this with contemporary technology, and that cross-cultural commonalities in the experience of, and creativity within, the various modalities are significant. With the advent of Intelligent MultiMedia, this aspect of consciousness implementation in mind/brain acquires new significance.
