God's Solution Declan Hayes, 2007-08 God's Solution demolishes the anti religious arguments of Richard Dawkins Sam

Harris Daniel Dennett Peter Singer and atheism's other polemicists who have scurried aboard this lucrative bandwagon God's Solution begins by showing us that science not religion has always been war's harlot God's Solution then proceeds to show how and why sacred scripture makes sense and how the secular ideologies raged against it have always brought out the worst in people God's Solution then demolishes Darwinism as a scientific theory and denounces Darwin as the racist bigot that he was God's Solution uses a wide array of examples to show that Mother Nature is much too varied to be shoehorned into a simplistic theory like evolution God's Solution then uses the charity industry to show that religion not atheism holds the moral high ground In using the arguments of the secular jihadists to show how life without religion is meaningless God's Solution will prove a valuable resource to all readers who honestly seek the scientifically grounded metaphysical truths of their own inherited faith and who wish to imbue their children and grandchildren with those same beliefs **Practical**

Micromechanics of Composite Materials Jacob Aboudi, Steven M. Arnold, Brett A. Bednarczyk, 2021-08-31 Practical Micromechanics of Composite Materials provides an accessible treatment of micromechanical theories for the analysis and design of multi-phased composites Written with both students and practitioners in mind and coupled with a fully functional MATLAB code to enable the solution of technologically relevant micromechanics problems the book features an array of illustrative example problems and exercises highlighting key concepts and integrating the MATLAB code The MATLAB scripts and functions empower readers to enhance and create new functionality tailored to their needs and the book and code highly complement one another The book presents classical lamination theory and then proceeds to describe how to obtain effective anisotropic properties of a unidirectional composite ply via micromechanics and multiscale analysis Calculation of local fields via mechanical and thermal strain concentration tensors is presented in a unified way across several micromechanics theories The importance of these local fields is demonstrated through the determination of consistent Margins of Safety MoS and failure envelopes for thermal and mechanical loading Finally micromechanics based multiscale progressive damage is discussed and implemented in the accompanying MATLAB code Emphasizes appropriate application of micromechanics theories to composite behavior Addresses multiple popular micromechanics theories which are provided in MATLAB Discusses stresses and strains resulting from realistic thermal and mechanical loading Includes availability of solution manual for professors using the book in the classroom **Nonlinear Finite Elements for Continua and Structures**
