Collectives and the Design of Complex Systems Kagan Tumer, David Wolpert, 2012-12-06 Many complex systems found in nature can be viewed as function optimizers In particular they can be viewed as such optimizers of functions in extremely high dimensional spaces Given the difficulty of performing such high dimensional optimization with modern computers there has been a lot of exploration of computational algorithms that try to emulate those naturally occurring function optimizers Examples include simulated annealing SA 15 18 genetic algorithms GAs and evolutionary computation 2 3 9 11 20 22 24 28 The ultimate goal of this work is an algorithm that can for any provided high dimensional function come close to extremizing that function Particularly desirable would be such an algorithm that works in an adaptive and robust manner without any explicit knowledge of the form of the function being optimized In particular such an algorithm could be used for distributed adaptive control one of the most important tasks engineers will face in the future when the systems they design will be massively distributed and horribly messy congeries of computational systems
