Computing and Cognition '16 John. S Gero, 2016-12-31 This book gathers the peer reviewed and revised versions of papers from the Seventh International Conference on Design Computing and Cognition DCC 16 held at Northwestern University Evanston Chicago USA from 27-29 June 2016. The material presented here reflects cutting edge design research with a focus on artificial intelligence, cognitive science and computational theories. The papers are grouped under the following nine headings describing advances in theory and applications alike and demonstrating the depth and breadth of design computing and design cognition: Design Creativity, Design Cognition, Design Approaches, Design Support, Design Grammars, Design Cognition, Design Behaviors, Design Processes, Design Synthesis, Design Activity and Design Knowledge. The book will be of particular interest to researchers, developers and users of advanced computation in design across all disciplines and to all readers who need to gain a better understanding of designing.

Facility Programming (Routledge Revivals) Wolfgang F. E. Preiser, 2016-05-20 First published in 1978, the objective of this book is to provide an authoritative and selective overview of current user orientated programming methods within the field of environmental design. The 19 chapters compiled in this volume describe procedures and the information content of innovative approaches used by leading programming experts in the private and institutional sectors. Emphasis is placed on a qualitative and illustrative focus of selected approaches to environmental programming with the eventual occupants in mind. The chapter groupings are intended to reflect three major areas of professional engagement that serve the field of facility programming. The first group describes the approaches of firms or groups that were organised exclusively to provide environmental analysis and programming services. Part II is composed of chapters by authors who belong to established architectural firms with programming departments and Part III presents evidence that pertains to the supporting role of research and guidance literature from authors primarily affiliated with government agencies or supported by large organisations.

Operations Management : a Quantitative Approach P. B. Mahapatra, 2010 It is specially designed to suit the latest syllabi of courses on Production Operations Management offered by various universities to the undergraduate students of Mechanical Engineering, Production Engineering and Industrial Engineering as well as students of Master of Business Administration (MBA) specializing in Production and Operations Management stream. The book offers a balanced coverage of the fundamental principles of managing operations and the quantitative techniques used to support the functions of operations management. There are many worked out examples in each chapter to enable students to comprehend the quantitative material of the book. The text is divided into two parts. Techniques of operations research such as linear programming, transportation assignment models, dynamic optimization and waiting line models are discussed in Part I. Some generic classes with functions for array and matrix manipulation, analysis of queuing models and evaluation of probability for some standard distributions have been defined and used throughout for writing programs for diverse managerial applications. Part II is devoted to a detailed discussion of management functions such as Product Design and Development, Forecasting, Capacity Analysis, Plant Layout
