Key Concepts

- Concentrations can be measured qualitatively and quantitatively.
- Molarity is the number of moles of solute dissolved per liter of solution.

$$\text{molarity (M)} = \frac{\text{moles of solute}}{\text{liters of solution}}$$

- Molality is the ratio of the number of moles of solute dissolved in 1 kg of solvent.

$$\text{molality (m)} = \frac{\text{moles of solute}}{\text{kg of solvent}}$$

Pharmacokinetic Principles of Dosing Adjustments Ronald D. Schoenwald, 2023-01-27 This book has evolved over the last twenty years from a cumulative effort to develop a professional course in pharmacokinetics that would assist future practitioners in therapeutic decision making As practicing pharmacists become more involved with patient advising it becomes apparent that clinicians will be required to make dosing adjustments for certain drugs This will become increasingly more likely as pharmacy practitioners have access to patient information that requires careful attention to dose and dosing interval which in turn correlates to various pharmacokinetic parameters such as half life and the volume of distribution of drugs Although many handbooks are available on this subject they do not devote more than a brief chapter to the concepts behind the dosing adjustment approach *Pharmacokinetic Principles of Dosing Adjustments* provides the concepts used to formulate approaches Equations that appear in various chapters are developed not through lengthy derivations but by more of an intuitive approach The equations are presented in their conceptual form rather than a separate convenient form applicable to each clinic situation This method is used to demonstrate how you can apply the initial conditions to the properties of the drug patient and or route of administration rather than memorizing each variation of the basic equation The author defines pertinent pharmacokinetic terms as well as kinetic processes and classical modeling relevant to dosing adjustments Examples are included within each chapter that emphasize an understanding of the concepts *Pharmacokinetic Principles of Dosing Adjustments* was written for practitioners who operate in a setting that requires careful consideration to dosing parameters and in particular with patients that require constant monitoring of therapeutic outcomes including dosing adjustments Based on the introductory course in pharmacokinetics taught by Dr Schoenwald for the past twenty years this book is intended as a review and resource for practicing pharmacists
