Sherrell McNeeley, 2021-07-23 Pipeline systems range from very simple ones to very large and quite complex ones They may be as uncomplicated as a single pipe conveying water from one reservoir to another or they may be as elaborate as an interconnected set of water distribution networks for a major metropolitan area Individual pipelines may contain any of several kinds of pumps at one end or an interior point they may deliver water to or from storage tanks So how do these systems work What principles are involved and how are the systems successfully analyzed and understood You can find the answers in this book By reading it you will be able to solve problems relating to flow through pipelines flow between reservoirs and the estimation of pipe friction factors This guide will give you the basic theory and illustrate it through worked examples You can then further cement that understanding by working through a series of self study questions By the end you can apply the Continuity equation Energy Bernoulli equation and the equations for estimating energy loss such as Darcy Weisbach and Colebrook White equations to solve a wide variety of engineering problems

Supplementary Material and Solutions Manual for Mathematical Modeling in the Environment Charles R. Hadlock, 2020-05-05 This manual is meant to provide supplementary material and solutions to the exercises used in Charles Hadlock's textbook *Mathematical Modeling in the Environment* The manual is invaluable to users of the textbook as it contains complete solutions and often further discussion of essentially every exercise the author presents in his book This includes both the mathematical computational exercises as well as the research questions and investigations Since the exercises in the textbook are very rich in content rather than simple mechanical problems and cover a wide range most readers will not have the time to work out every one on their own Readers can thus still benefit greatly from perusing solutions to problems they have at least thought about briefly Students using this manual still need to work out solutions to research questions using their own sources and adapting them to their own geographic locations or to numerical problems using their own computational schemes so this manual will be a useful guide to students in many course contexts Enrichment material is included on the topics of some of the exercises Advice for teachers who lack previous environmental experience but who want to teach this material is also provided and makes it practical for such persons to offer a course based on these volumes This book is the essential companion to
