Telemetry Manual K. McFarlane, National Institute of Water and Atmospheric Research (N.Z.), 1994 **Description and Operating Instructions for a 7-channel Telemetry System for Physiological Temperatures and the Electrocardiogram** David A. Ratino, Adolph R. Marko, William C. Kaufman, 1968 Previous telemetry designs were improved to produce a system specific to the physiological evaluation of the thermal adequacy of space suits A small seven channel pulse duration multiplexed telemetry system which transmits an electrocardiogram rectal temperature with an accuracy better than or 0.05°C and five skin temperatures with an accuracy better than or 0.2°C was constructed The entire unit is enclosed in a 13 by 10 by 5 cm box worn under the space suit Components that have become available since construction could reduce this size to one fifth without sacrificing performance Three mercury batteries 12 v power the equipment for 40 hours and provide reliable reception at distances of 90 m The system is activated by connecting the sensor harness and the output is checked and calibrated by a 3 position switch The unit has been tested during exercise studies in space suits and during metabolic experiments on men exercising in cold environments It provided reliable transmission of accurate temperature and heart rate data for both laboratory and field studies It has simplified experimental procedures by eliminating all complications of hard wire leads penetrating pressure shells in space suits and by completely freeing the subject in field studies Author **The Interscan Telemetry System Operations Manual** Snowy Mountains Hydro-electric Authority, 1974 **CSIDAT Remote Telemetry System** John William Bennett, Matt Fenwick, Bernard Petraitis, 1992
