GIS Cartography Gretchen N. Peterson, 2020-11-24 Since the publication of the bestselling second edition 5 years ago vast and new globally relevant geographic datasets have become available to cartography practitioners and with this has come the need for new ways to visualize them in maps as well as new challenges in ethically disseminating the visualizations With new features and significant updates that address these changes this edition remains faithful to the original vision that cartography instruction should be software agnostic Discussing map design theory and technique rather than map design tools this book focuses on digital cartography and its best practices This third edition has completely new sections on how to deal with maps that go viral and the ethics therein new presentation ideas new features such as amenities climate data and hazards the new Equal Earth projection and vector tile design considerations All chapters are thoroughly updated with new illustrations and new sections for datasets that didn't exist when the second edition was published as well as new techniques and trends in cartography New in the third edition A true textbook written with a friendly style and excellent examples explaining everything from layout design to fonts and colors to specific design considerations for individual feature types to static and dynamic cartography issues Thoroughly updated with new features such as points of interest climate data hazards and buildings new projections such as the Equal Earth projection and the Spilhaus projection and vector tile design considerations such as label placement techniques and tricks for making world class basemaps Includes over 70 new map examples that display the latest techniques in cartography Reflects on new developments in color palettes visualization patterns datums and non static output media such as animation interaction and

large format cinematic techniques that weren't available for the second edition. Defines and illustrates new terms that have made their way into the profession over the last few years such as story maps, flow maps, Dorling cartograms, spec sheets, bivariate choropleths, firefly cartography, Tanaka contours, and value by alpha. In this third edition, author Gretchen Peterson takes a don't let the technology get in the way approach to the presentation, focusing on the elements of good design: what makes a good map and how to get there rather than specific software tools. She provides a reference that you can thumb through time and again as you create your maps. Copiously illustrated, the third edition explores novel concepts that kick start your pursuit of map making excellence. The book doesn't just teach you how to design and create good maps; it teaches you how to design and create superior maps.

Designed Maps Cynthia A. Brewer, 2008. This sequel to the highly successful *Designing Maps* offers a graphics intensive presentation of published maps, providing cartographic examples that GIS users can then adapt for their own needs. Each chapter characterizes a common design decision and includes a demonstration map which is annotated with specific information needed to reproduce the design, such as text fonts, sizes, and styles; line weights, colors, and patterns; marker symbol fonts, sizes, and colors; and fill colors and patterns. Visual hierarchies and the purpose of each map are considered with the audience in mind, drawing a clear connection between intent and design. The book also includes a valuable task index that explains what ArcGIS 9 tools to use for desired cartographic effects. From experienced cartographers to those who make GIS maps only occasionally, all GIS users will find this book to be an indispensable resource.

GIS Cartography Gretchen N. Peterson, 2014-05-23. In the five years since the publication of the first edition of *A Guide to Effective Map Design*, cartography and software have become further intertwined. However, the initial motivation for publishing the first edition is still valid: many GISers enter the field without so much as one hour of design instruction in their formal education. Yet they are then tasked with creating one of the most effective, easily recognized communication tools: a map. See what's new in the Second Edition: Projection theory, Hexagonal binning, Big Data point density maps, Scale dependent map design, 3D building modeling, Digital cartography and its best practices. Updated graphics and references. Study questions and lab exercises at the end of each chapter. In this second edition of a bestseller, author Gretchen Peterson takes a don't let the technology get in the way approach to the presentation, focusing on the elements of good design: what makes a good map and how to get there rather than specific software tools. She provides a reference that you can thumb through time and again as you create your maps. Copiously illustrated, the second edition explores novel concepts that kick start your pursuit of map making excellence. The book doesn't just teach you how to design and create maps; it teaches you how to design and create better maps.

This authoritative, reader-friendly text presents core principles of good map design that apply regardless of production methods or technical approach. The book addresses the crucial questions that arise at each step of making a map: Who is the audience? What is the purpose of the map? Where and how will it be used? Students get the knowledge needed to make sound decisions about data, typography, color,

projections scale symbols and nontraditional mapping and advanced visualization techniques Pedagogical Features Over 200 illustrations also available at the companion website as PowerPoint slides including 23 color plates Suggested readings at the end of each chapter Recommended Web resources Instructive glossary

field of cartographic research The SAGE Handbook of Visual Research Methods Eric Margolis, Luc Pauwels, 2011-07-31
This book captures the state of the art in visual research. Margolis and Pauwels have brought together in one volume a unique survey of the field of visual research that will be essential reading for scholars and students across the social sciences, arts, and humanities. The SAGE Handbook of Visual Research Methods encompasses the breadth and depth of the field and points the way to future research possibilities. It illustrates cutting edge as well as long standing and recognized practices. This book is not only about research; it is also an example of the way that the visual can be incorporated into data collection and the presentation of research findings. Chapters describe a methodology or analytical framework, its strengths and limitations, possible fields of application, and practical guidelines on how to apply the method or technique. The Handbook is organized into seven main sections: Framing the Field of Visual Research; Producing Visual Data and Insight; Participatory and Subject Centered Approaches; Analytical Frameworks and Approaches; Visualization Technologies and Practices; Moving Beyond the Visual; Options and Issues for Using and Presenting Visual Research. Eric Margolis is an Associate Professor in the Hugh Downs School of Human Communication. He is President of the International Visual Sociology Association. Luc Pauwels is Professor of Visual Culture at the University of Antwerp. He is Chair of the Visual Communication Studies Division of the ICA and Vice President of the International Visual Sociology Association. Designing Better Maps Cynthia A. Brewer, 2005. Describing how to build balanced map layouts suited to varied mapping goals, this guide focuses on export options that suit different media and can be edited in other applications. The wide range of text characteristics needed for expert map design, as well as how to improve map readability with type effects such as character spacing, leading, callouts, shadows, and halos, is detailed. Tips are included for using font tools in the Windows operating system such as creating special characters in map text, as is information on using text characteristics to indicate feature locations, categories, and hierarchies on maps. How cartographic conventions guide placement of labels for point, line, and area features are also explained.
