It is a comprehensive reference book that appeals to an academic audience at the graduate post graduate and PhD level and can be used for lectures in climatology environmental studies and geography. This work is the collection of lecture notes as well as synthesized analyses of published papers on the described subjects. It comprises 18 chapters and is divided into three parts. Part I discusses general circulation climate variability stratosphere troposphere coupling and various teleconnections. Part II mainly explores the area of different solar influences on climate. It also discusses various oceanic features and describes ocean atmosphere coupling. But without prior knowledge of other important influences on the earth's climate the understanding of the actual role of the sun remains incomplete.
