Small Bang Le Des Nanotechnologies:

Le Small Bang des nanotechnologies Étienne Klein, 2011-01-13 Les nanotechnologies recouvrent désormais un spectre très large d'activités fort différentes qui vont de l'électronique dernier cri aux nouvelles biotechnologies en passant par la conception de matériaux dits intelligents. Elles bénéficient depuis plusieurs années de crédits massifs et comme elles concerneront sans doute tous les secteurs industriels les plus classiques comme les plus high tech on les associe même à une véritable révolution de civilisation qui pourrait modifier spectaculairement nos façons de vivre de travailler de communiquer de produire de consommer de contrôler de surveiller. Dès lors elles s'arriment la question des valeurs que celles-ci soient morales ou spirituelles et interrogent l'idée que l'on se fait de la société de ce qu'elle devrait être ou ne devrait jamais devenir. Une réflexion sur la science et la technique dans la société au plus près des progrès récents. Physicien spécialiste notamment de la question du temps, auteur du *Facteur temps*, ne sonne jamais deux fois et de *Discours sur l'origine de l'Univers*, Étienne Klein dirige le Laboratoire de recherche sur les sciences de la matière LARSIM du CEA Saclay. *From Additive Manufacturing to 3D/4D Printing 3* Jean-Claude André, 2018-03-07 With a turnover of some 5.15 billion year the additive manufacturing has industrial niches bearers thanks to processes and materials more and more optimized. While some niches still exist on the application of additive techniques in traditional fields from jewelry to food for example several trends emerge using new concepts: collective production, realization of objects at once without addition of material, micro fluidic, 4D printing exploiting programmable materials and materials bio printing etc. There are both opportunities for new markets, promises not envisaged less than 10 years ago but difficulties in reaching them. *Le Small Bang* Klein Étienne Klein, 2011 **Science and Society in Latin America** Pablo Kreimer, 2019-04-02 In the form of a sociological pilgrimage this book approaches some topics essential to understanding the role of science in Latin America juxtaposing several approaches and exploring three main lines: First the production and use of knowledge in these countries viewed from a historical and sociological point of view; second the reciprocal construction of scientific and public problems presented through significant cases such as Latin American Chagas Disease; and third the past and present asymmetries affecting the relationships between centers and peripheries in scientific research. These topics show the paradox of being at the same time modern and peripheral. *From Additive Manufacturing to 3D/4D Printing 1* Jean-Claude André, 2017-11-29 In 1984 additive manufacturing represented a new methodology for manipulating matter consisting of harnessing materials and/or energy to create three-dimensional physical objects. Today additive manufacturing technologies represent a market of around 5 billion euros per year with an annual growth between 20 and 30%. Different processes, materials and dimensions from nanometer to decameter within additive manufacturing techniques have led to 70 000 publications on this topic and to several thousand patents with applications as wide-ranging as domestic uses. Volume 1 of this series of books presents these different technologies with illustrative industrial examples. In addition to the strengths of 3D methods this book also covers their weaknesses and the

developments envisaged in terms of incremental innovations to overcome them , La revolución transhumanista Luc Ferry,2017-04-27 Ha surgido una nueva ideología con sus sabios y sus profetas sus eminencias y sus intelectuales que lleva el nombre de transhumanismo una corriente cada vez más poderosa que con el apoyo de medios científicos y materiales considerables milita a favor del uso intensivo de las células madre la clonación reproductiva la hibridación hombre máquina la ingeniería genética y las manipulaciones germinales que podrán modificar nuestra especie de forma irreversible todo ello con el fin de mejorar la condición humana El progreso de las tecnociencias en estos ámbitos es de una amplitud y una rapidez inimaginables es silencioso no llama la atención de los políticos y apenas la de los medios de comunicación de modo que se produce a espaldas de la mayor parte de la población y prácticamente no está regulado Esta nueva situación nos obliga a reflexionar a anticiparnos a las abisales cuestiones que estos nuevos poderes del hombre sobre el hombre plantearán inevitablemente en los próximos años en los planos político político económico pero también espiritual **De la ligereza** Gilles Lipovetsky,2016-09-07 La ligereza viene a decir Lipovetsky es la tendencia dominante en el espíritu de nuestra época Marx habría dicho es la ideología de nuestra época y se manifiesta en todos o casi todos los aspectos del mundo occidental De las artes plásticas a la industria de la energía de la informática a las prácticas consumistas de la educación al deporte y el cultivo del cuerpo de la tecnología a la medicina del diseño a las relaciones sexuales de los imaginarios colectivos a las fantasías individuales el fantasma de la ligereza la miniaturización la provisionalidad la liberación de todas las ataduras la evanescencia la frivolidad y la virtualidad recorre Occidente como expresión de deseos aspiraciones sueños esperanzas y utopías La ligereza es un valor un ideal un imperativo estamos en la civilización de lo ligero En el terreno de la vida personal la primera modernidad era pesada moralista y rigorista buscaba compromisos e imponía obligaciones La última modernidad ha desencadenado una revolución liberadora que sin embargo presenta una doble cara Por un lado se caracteriza por la búsqueda y el cultivo de la libertad individual la comodidad la indiferencia lo cool la relajación interior Pero por otro tiene contrapartidas peligrosas Los individuos necesitan sentirse libres pero también quieren establecer vínculos El resultado de esta tensión es una angustia que no cesa Tampoco cesan antes bien crecen la incultura de los estudiantes las agresiones y faltas de respeto cotidianas la desinformación de los medios de información la inmoralidad de los representantes públicos el número de suicidios los neofascismos disfrazados de progresismos la distancia económica entre pobres y ricos Y estamos solo en los comienzos Un ensayo pionero como muchos otros del autor La recherche en réformes Jérôme Aust,Cécile Crespy,2014-09-16 Renforcement du financement sur projets et de la valorisation intensification des injonctions la valorisation économique de la science implication croissante des collectivités locales et de l'Europe influence de la nouvelle gestion publique dans le gouvernement de la recherche voici quelques unes des transformations qui ont affecté les politiques de recherche en France et en Europe depuis le début des années 2000 En redessinant les frontières entre la profession scientifique l'état et le marché ces réformes suscitent des contestations et des controverses Peu d'enquêtes ont cependant t men

es pour comprendre et analyser les conséquences de ces formes. L'objectif de ce livre est de rendre compte de ces évolutions en mobilisant des enquêtes de terrain approfondies. En faisant varier les points de vue et les échelles d'analyse, l'ouvrage offre un tableau document des formes en cours en France mais aussi en Grande Bretagne, en Allemagne ou au Japon. Cet ouvrage suggère que les restructurations en cours sont complexes et qu'elles ne se résument pas à une emprise croissante de l'état et du marché sur le gouvernement de la recherche. Les membres de la profession académique ne subissent pas ces transformations sans capacités de résistance et d'action et les formes suscitent aussi des oppositions sociales et éthiques qui contribuent à redessiner les équilibres entre science, état et marché. Jérôme AUST est chargé de recherche Sciences Po CSO CNRS, Chargé de cours Sciences Po à l'Ecole normale supérieure de Lyon et Sciences Po Lyon, il travaille sur les recompositions qui marquent les politiques d'enseignement supérieur et de recherche. Cécile CRESPIY est Professeure des universités en science politique Sciences Po Toulouse et chercheure au LaSSP, Laboratoire des sciences sociales du politique. Ses recherches portent sur le gouvernement des politiques scientifiques et universitaires.

Traité de la matière Libero Zuppiroli, 2015-07-02. La matière accompagne l'homme dans toutes ses activités. Il sait l'extraire, la transformer ou en faire la synthèse mais aussi l'imaginer, la révéler même au travers de pratiques comme l'alchimie ou les nanosciences. Il en a fait des matériaux utilisables dans toutes ses constructions réelles ou qui portent son monde virtuel comme le silicium ultra pur des puces qu'il fabrique, l'échelle du nanomètre, les cristaux liquides des écrans, le cuivre des connexions électriques ou les matières plastiques des boîtiers et emballages. Ce traité est né du désir de dévoiler les secrets de la matière dans ses relations avec l'homme et d'interroger de manière critique ses utilisations. La première partie destine un large public de curieux, interroge la créativité en sciences de la matière. Comment contrôler les propriétés exceptionnelles de chaque type de matériau, quelle échelle opérer, celle macroscopique de notre quotidien, celle microscopique des atomes ou encore aux échelles intermédiaires de la microstructure. Ce texte s'accompagne des contributions d'artistes s'exprimant par des mandales de Gisèle Rime, l'exploration du chaos de Catherine Bolle ou les 120 photographies originales de Christiane Grimm. La seconde partie plus spécialisée rappelle que la cohésion des matériaux relève de la mécanique quantique et que leurs propriétés sont liées entre autres à la théorie statistique des milieux ou la théorie des dislocations. Un excellent ouvrage d'une grande clarté qui se présente aussi comme un livre d'art par la qualité des images du papier et de l'impression. Pour La Science Originale, attrayant, inspirant et sortant résolument des sentiers battus. La Croix.

Numérique & vie Véronique Kleck, 2006. La révolution numérique confronte nos sociétés à des mutations profondes et inédites. Pour les accompagner, nous devons repenser la question politique, le rapport soi-même et au monde et jusqu'au sens même de nos vies. Dans cet ouvrage, Véronique Kleck nous permet de mieux comprendre les défis relever les nouveaux rapports de force et les acteurs politiques de la révolution numérique. Elle nous entraîne dans le projet le plus exaltant et le plus immédiat qui nous concerne tous : la définition d'une philosophie politique pour nos sociétés en réseaux.
