Wireless Sensor Networks Holger Karl, Andreas Willig, Wolisz, 2011-05-02

With great pleasure we welcomed the attendees to EWSN2004 the 1st European Workshop on Wireless Sensor Networks held in the exciting and lively city of Berlin Wireless sensor networks are a key technology for new ways of interaction between computers and the physical environment which surrounds us Compared to traditional networking technologies wireless sensor networks are faced with a rather unique mix of challenges scalability energy efficiency self configuration constrained computation and memory resources in individual nodes data centricity and interaction with the physical environment to name but a few The goal of this workshop is to create a forum for presenting new results in the flourishing field of wireless sensor networks By bringing together academia and industry we hope to stimulate new opportunities for collaborations In compiling the scientific program we have been quite selective Thanks to the efforts of 90 reviewers who delivered 252 reviews for the 76 papers originally submitted from all over the world a strong selection of the 24 best contributions was made possible The Technical Program Committee created an outstanding program covering the broad scope of this highly interdisciplinary field from distributed signal processing through networking and middleware issues to application experience Running such a workshop requires dedication and much work from many people We want to thank in particular Petra Hutt Irene Ostertag and Heike Klemz for their valuable and esteemed help in the local organization of this workshop We hope that you enjoy this volume and if you were lucky enough to attend we hope that you enjoyed the discussions with colleagues working in this fascinating area Internet of Things in Smart Sewer and Drainage Systems Abdul Salam, 2023-12-14 This multidisciplinary book provides insights into the applications of the Internet of Things IoT to combined sewer overflows CSO

and stormwater management SWM systems It explores technical challenges and presents recent results to improve sewer and drainage system management using wireless underground communications and sensing in IoT The book addresses both existing sensing network technologies and those currently in development in three major areas of CSO combined sewer overflow management subsurface sensing and antennas in the layered medium It explores new applications of IoT in sewer systems to improve public health foster economic growth and enhance environmental quality and responsibility for the community Internet of Things in Smart Sewer and Drainage Systems Theory and Applications will be a valuable reference for graduate students and academic researchers as well as a hands on guide for wastewater technicians sanitary engineers environmental specialists and related industry practitioners

Distributed Linear Programming Models in a Smart Grid

Prakash Ranganathan, Kendall E. Nygard, 2017-03-31 This book showcases the strengths of Linear Programming models for Cyber Physical Systems CPS such as the Smart Grids Cyber Physical Systems CPS consist of computational components interconnected by computer networks that monitor and control switched physical entities interconnected by physical infrastructures A fundamental challenge in the design and analysis of CPS is the lack of understanding in formulating constraints for complex networks We address this challenge by employing collection of Linear programming solvers that models the constraints of sub systems and micro grids in a distributed fashion The book can be treated as a useful resource to adaptively schedule resource transfers between nodes in a smart power grid In addition the feasibility conditions and constraints outlined in the book will enable in reaching optimal values that can help maintain the stability of both the computer network and the physical systems It details the collection of optimization methods that are reliable for electric utilities to use for resource scheduling and optimizing their existing systems or sub systems The authors answer to key questions on ways to optimally allocate resources during outages and contingency cases e g line failures and or circuit breaker failures how to design de centralized methods for carrying out tasks using decomposition models and how to quantify un certainty and make decisions in the event of grid failures

Cybersecurity Vigilance and Security

Engineering of Internet of Everything Kashif Naseer Qureshi, Thomas Newe, Gwanggil Jeon, Abdellah Chehri, 2023-11-30 This book first discusses cyber security fundamentals then delves into security threats and vulnerabilities security vigilance and security engineering for Internet of Everything IoE networks After an introduction the first section covers the security threats and vulnerabilities or techniques to expose the networks to security attacks such as repudiation tampering spoofing and elevation of privilege The second section of the book covers vigilance or prevention techniques like intrusion detection systems trust evaluation models crypto and hashing privacy solutions for IoE networks This section also covers the security engineering for embedded and cyber physical systems in IoE networks such as blockchain artificial intelligence and machine learning based solutions to secure the networks This book provides a clear overview in all relevant areas so readers gain a better understanding of IoE networks in terms of security threats prevention and other security mechanisms

Topics on

Mathematics for Smart Systems Bernadette Miara, 2007 This volume gathers articles presented at a prominent European conference on smart systems and summarizes the activities carried out by a research and training network supported by the European community The contributions aim to exhibit new research topics in the areas of materials science advanced mathematical tools and elements of control and numerical algorithms relevant to the design and optimization of smart systems
