Specifically it treats hyperspectral image processing and hyperspectral signal processing as separate subjects in two different categories. Most materials covered in this book can be used in conjunction with the author's first book, *Hyperspectral Imaging Techniques for Spectral Detection and Classification*, without much overlap. Many results in this book are either new or have not been explored, presented or published in the public domain. These include various aspects of endmember extraction, unsupervised linear spectral mixture analysis, hyperspectral information compression, hyperspectral signal coding and characterization, as well as applications to conceal target detection, multispectral imaging and magnetic resonance imaging. *Hyperspectral Data Processing* contains eight major sections. Part I provides fundamentals of hyperspectral data processing. Part II offers various algorithm designs for endmember extraction. Part III derives theory for supervised linear spectral mixture analysis. Part IV designs unsupervised methods for hyperspectral image analysis. Part V explores new concepts on hyperspectral information compression. Parts VI-VII develop techniques for hyperspectral signal coding and characterization. Part VIII presents applications in multispectral imaging and magnetic resonance imaging. *Hyperspectral Data Processing* compiles an algorithm compendium with MATLAB codes in an appendix to help readers implement many important algorithms developed in this book and write their own program codes without relying on software packages. *Hyperspectral Data Processing* is a valuable reference for those who have been involved with hyperspectral imaging and its techniques, as well as those who are new to the subject.

Spatial Agent-Based Simulation Modeling in Public Health S. M. Niaz Arifin, Gregory R. Madey, Frank H. Collins, 2016-03-29. Presents an overview of the complex biological systems used within a global public health setting and features a focus on malaria analysis. Bridging the gap between agent-based modeling and simulation (ABMS) and geographic information systems (GIS), *Spatial Agent-Based Simulation Modeling in Public Health: Design, Implementation and Applications for Malaria Epidemiology* provides a useful introduction to the development of agent-based models (ABMs) by following a conceptual and biological core model of *Anopheles gambiae* for malaria epidemiology. Using spatial ABMs, the book includes mosquito vector control interventions and GIS as two example applications of ABMs, as well as a brief description of epidemiology modeling. In addition, the authors discuss how to most effectively integrate spatial ABMs with a GIS. The book concludes with a combination of knowledge from entomological, epidemiological, simulation-based and geo-spatial domains in order to identify and analyze relationships between various transmission variables of the disease. *Spatial Agent-Based Simulation Modeling in Public Health: Design, Implementation and Applications for Malaria Epidemiology* also features location-specific mosquito abundance maps that play an important role in malaria control activities by guiding future resource allocation for malaria control and identifying hotspots for further investigation. Discussions on the best modeling practices in an effort to achieve improved efficacy, cost-effectiveness, ecological soundness and sustainability of vector control for malaria. An overview of the various ABMs, GIS and spatial statistical methods used in entomological and epidemiological studies, as well as the model malaria study. A companion

website with computer source code and flowcharts of the spatial ABM and a landscape generator tool that can simulate landscapes with varying spatial heterogeneity of different types of resources including aquatic habitats and houses Spatial Agent Based Simulation Modeling in Public Health Design Implementation and Applications for Malaria Epidemiology is an excellent reference for professionals such as modeling and simulation experts GIS experts spatial analysts mathematicians statisticians epidemiologists health policy makers as well as researchers and scientists who use manage or analyze infectious disease data and or infectious disease related projects The book is also ideal for graduate level courses in modeling and simulation bioinformatics biostatistics public health and policy and epidemiology *Meta-Analysis* Shahjahan
