The authors examine the facet structure of mindfulness using five recently developed mindfulness questionnaires. Two large samples of undergraduate students completed mindfulness questionnaires and measures of other constructs. Psychometric properties of the mindfulness questionnaires were examined, including internal consistency and convergent and discriminant relationships with other variables. Factor analyses of the combined pool of items from the mindfulness questionnaires suggested that collectively they contain five clear, interpretable facets of mindfulness. Hierarchical confirmatory factor analyses suggested that at least four of the identified factors are components of an overall mindfulness construct and that the factor structure of mindfulness may vary with meditation experience. Mindfulness facets were shown to be differentially correlated in expected ways with several other constructs and to have incremental validity in the prediction of psychological symptoms. Findings suggest that conceptualizing mindfulness as a multifaceted construct is helpful in understanding its components and its relationships with other variables.

Mindfulness is usually defined to include bringing one's complete attention to the experiences occurring in the present moment, in a nonjudgmental or accepting way (Brown & Ryan, 2003; Kabat-Zinn, 1990; Linehan, 1993a; Marlatt & Kristeller, 1999). Descriptions of mindfulness and methods for cultivating it originate in eastern spiritual traditions, which suggest that mindfulness can be developed through the regular practice of meditation, and that increases in positive qualities such as awareness, insight, wisdom, compassion, and equanimity are likely to result (Goldstein, 2002; Kabat-Zinn, 2000). In recent decades, traditional mindfulness meditation practices have been adapted for secular use and incorporated into several interventions that are now widely available in medical and mental health settings. These interventions include dialectical behavior therapy (DBT; Linehan, 1993a, 1993b), mindfulness-based stress reduction (MBSR; Kabat-Zinn,

1982, 1990), mindfulness-based cognitive therapy (MBCT; Segal, Williams, & Teasdale, 2002), acceptance and commitment therapy (ACT; S. C. Hayes, Strosahl, & Wilson, 1999), and relapse prevention for substance abuse (Marlatt & Gordon, 1985; Parks, Anderson, & Marlatt, 2001) as well as variations on these approaches. These interventions conceptualize mindfulness as a set of skills that can be learned and practiced in order to reduce psychological symptoms and increase health and well-being. MBSR and MBCT rely heavily on formal meditation practices, in which participants spend up to 45 minutes each day directing their attention in specific ways. In contrast, DBT and ACT rely on a wide variety of shorter exercises in which mindfulness-related skills can be practiced without necessarily engaging in meditation.

The empirical literature increasingly supports the efficacy of mindfulness-based interventions. Reductions in

Principles and Practice of Stress Management, Fourth Edition Paul M Lehrer, PhD, Robert L. Woolfolk, 2021-06-14 The leading clinical reference and text on stress management has now been significantly revised with 60% new material reflecting key developments in the field. Foremost experts review the what's, whys, and how-tos of progressive relaxation, biofeedback, meditation, hypnosis, cognitive methods, and other therapies. Chapters describe each method's theoretical foundations, evidence base, procedures, applications, and contraindications. Assessment and implementation are illustrated with extensive case examples. The volume examines the effects of stress on both mind and body from basic science to practical implications for everyday life and health care. New to This Edition: Greatly expanded evidence base; every method is now supported by controlled clinical research. Advances in knowledge about stress and the brain are integrated throughout. Chapter on children and adolescents. Chapter on selecting the best methods for individual patients. Chapter on hyperventilation and carbon dioxide biofeedback. Chapter on neuroinflammation. Survey Development Tony Chiu Ming Lam, Kathy Ellen Green, 2023-05-26 Survey Development: A Theory-Driven Mixed Method Approach provides both an overview of standard methods and tools for developing and validating surveys and a conceptual basis for survey development that advocates establishing and testing of hypotheses pertaining to presumptions and score interpretation and use inferences and mixing quantitative and qualitative methods. The book has 14 chapters which are divided into four parts. Part A includes six chapters that deal with theory and methodology. Part B has five chapters and it gets into the process of constructing the survey using both quantitative and qualitative methods. Part C comprises two chapters devoted to assessing the quality or psychometric properties: reliability and validity of survey responses. Finally, the one chapter in Part D is an attempt to present a synopsis of what was covered in the previous chapters in regard to developing a survey with the TDMM framework for developing survey and conducting survey research. This provides a full process for survey development intended to yield results that can support valid interpretation and use of scores. Including detailed online resources, this book is suitable for graduate students who use or are responsible for interpretation of survey research and survey data as well as survey methodologists and practitioners who use surveys in their field. Assessing Spirituality in a Diverse World Amy L. Ai, Paul Wink, Raymond F. Paloutzian, Kevin A. Harris, 2020-12-07 This volume addresses an important problem in social scientific research on global religions and spirituality: How to evaluate the role of diverse religious and spiritual beliefs and practices within the rapid evolution of spiritual globalization and diversification trends. The book examines this question by bringing together a panel of international scholars including psychologists, sociologists, and researchers in religious studies, public health, medicine, and social work. The content includes chapters describing innovative concepts of post-Christian spirituality, Eastern forms of meditation, afterlife beliefs associated with the three dominant cultural legacies, various non-religious worldviews, spiritual Jihad, and secular and religious reverence. The book also covers such important themes as

Mindfulness in Internet and New Media Wen-Ko Chiou,Chao Liu,Hao Chen,Shuhua Zhou,2023-10-24 Mindfulness is about being aware in a certain way being consciously aware on purpose living in the present moment without mental judgment In addition to the in depth application of mindfulness in different subdisciplines of psychology e g social personality clinical developmental health organizational there is also a trend toward cross fertilization with other social and behavioral disciplines e g design kinesiology sociology family studies education anthropology neuroscience philosophy economics medicine organizational science However the

application of mindfulness in the field of communication is limited. With the rapid development of the Internet and new media, the study of Internet communication is growing rapidly. The Internet and new media make it easy to connect with others, explore a new world, and regard cyberspace as an extension of one's own thoughts and personality. Nevertheless, when people use the Internet and new media mindlessly, they will easily experience the social effects on their virtual selves and encounter psychological problems, e.g., network morality, network anxiety, network pornography, network addiction, and cyberbullying, which has become a widespread and serious problem. As an important part of positive psychology, mindfulness intervention has been proved to help improve a series of negative psychological states and promote positive emotions and subjective well-being. However, what theoretical and practical contributions can mindfulness in the Internet and new media bring remains unknown. Thus, this Research Topic focuses on the influence and intervention of mindfulness on the psychological problems caused by the network new media communication. We welcome high quality studies using a variety of research methods including quantitative, qualitative, mixed methods, and reviews on the second generation of mindfulness interventions and other meditation based interventions, e.g., focused attention meditation, transcendental meditation, and loving kindness meditation. This Research Topic encourages submissions that cover but are not limited to the following topics: 1. The internet and new media guided mindfulness and loving kindness meditation practice; 2. Mindfulness and interpersonal communication in the network; network trust; network security; network intimacy; 3. Mindfulness and network clustering behavior; 4. Mindfulness and online consumer psychology; 5. Mindfulness and cyber moral psychology; cyberbullying; cyber altruism and prosocial behavior; 6. Mindfulness and online pornography; 7. Mindfulness and internet addiction; 8. Mindfulness and online psychological counseling; 9. Mindfulness and new media anxiety.
