Net Zero Energy Buildings Linda Reeder, 2016-03-31 This book presents 18 in depth case studies of net zero energy buildings low energy building that generate as much energy as they consume over the course of a year for a range of project types sizes and U S climate zones Each case study describes the owner s goals the design and construction process design strategies measurement and verification activities and results and project costs With a year or more of post occupancy performance data and other project information as well as lessons learned by project owners and developers architects engineers energy modelers constructors and operators each case study answers the questions What were the challenges to achieving net zero energy performance and how were these challenges overcome How would stakeholders address these issues on future projects Are the occupants satisfied with the building Do they find it comfortable Is it easy to operate How can other projects benefit from the lessons learned on each project What would the owners designers and constructors do differently knowing what they know now A final chapter aggregates processes to engage in and pitfalls to avoid when approaching the challenges peculiar to designing constructing and owning a net zero energy building By providing a wealth of comparable information this book which will flatten the learning curve for designing constructing and owning this emerging building type and improve the effectiveness of architectural design and construction

Reviews Of Accelerator Science And Technology - Volume 7: Colliders Alexander Wu Chao, Weiren Chou, 2015-02-11 The idea of colliding two particle beams to fully exploit the energy of accelerated particles was first proposed by Rolf Wider e who in 1943 applied for a patent on the collider concept and was awarded the patent in 1953 The first three colliders AdA in Italy CBX in the US and VEP 1 in the then Soviet Union came to operation about 50 years ago in the mid 1960s A number of other colliders followed Over the past decades colliders defined the energy frontier in particle physics Different types of colliders proton proton proton antiproton electron positron electron proton electron ion and ion ion colliders have played complementary roles in fully mapping out the constituents and forces in the Standard Model SM We are now at a point where all predicted SM constituents of matter and forces have been found and all the latest ones were found at colliders Colliders also play a critical role in advancing beam physics accelerator research and technology development It is timely that RAST Volume 7 is dedicated to Colliders
