Smart Agriculture Govind Singh Patel,Amrita Rai,Nripendra Narayan Das,R.P. Singh,2021-02-10 This book endeavours to highlight the untapped potential of Smart Agriculture for the innovation and expansion of the agriculture sector The sector shall make incremental progress as it learns from associations between data over time through Artificial Intelligence deep learning and Internet of Things applications The farming industry and Smart agriculture develop from the stringent limits imposed by a farm s location which in turn has a series of related effects with respect to supply chain management food availability biodiversity farmers decision making and insurance and environmental concerns among others All of the above mentioned aspects will derive substantial benefits from the implementation of a data driven approach under the condition that the systems tools and techniques to be used have been designed to handle the volume and variety of the data to be gathered Contributions to this book have been solicited with the goal of uncovering the possibilities of engaging agriculture with equipped and effective profound learning algorithms Most agricultural research centres are already adopting Internet of Things for the monitoring of a wide range of farm services and there are significant opportunities for agriculture administration through the effective implementation of Machine Learning Deep Learning Big Data and IoT structures

Smart Structures Paolo Gaudenzi,2009-10-15 Synthesizing knowledge acquired as a result of significant research and development over recent years Smart Structures clearly illustrates why these structures are of such intense current interest Gaudenzi offers valuable insight into both how they behave and how and at what cost they could be designed and produced for real life applications in cutting edge fields such as vibration control shape morphing structural health monitoring and energy transduction Smart Structures offers a basic and fundamental description of smart structures from the physical mathematical and engineering viewpoint It explains the basic physics relating to the behaviour of active materials gives the mathematical background behind the phenomena and provides tools for numerical simulation It also offers an insight into considerations related to the manufacturing assembly and integration of smart structures Smart

Structures is divided into 5 sections in the first part a definition of smart structures is proposed the motivation for developing a smart structure presented and the basic physics of active materials such as piezoelectrics electrostrictives magnetostrictives and shape memory alloys briefly recalled A second part is devoted to the mathematical modelling of piezoelectric bodies The third part discusses actuation and sensing mechanisms based on which the active part of a smart structure will produce results on the passive one The fourth part deals with active composites at the micromechanical and macromechanical level and the fifth part is devoted to applications of smart structures with examples taken from the aerospace field This introduction to smart structures will be useful both for structural and mechanical designers and for students and researchers at graduate level or beyond The diverse industries involved in this rapidly evolving field include aerospace automotive and bioengineering The Electrical Journal ,1912
