Rethink! Prototyping Christoph Gengnagel, Emilia Nagy, Rainer Stark, 2015-11-18 In this book the authors describe the findings derived from interaction and cooperation between scientific actors employing diverse practices They reflect on distinct prototyping concepts and examine the transformation of development culture in their fusion to hybrid approaches and solutions The products of tomorrow are going to be multifunctional interactive systems and already are to some degree today Collaboration across multiple disciplines is the only way to grasp their complexity in design concepts This underscores the importance of reconsidering the prototyping process for the development of these systems particularly in transdisciplinary research teams Rethinking Prototyping new hybrid concepts for prototyping was a transdisciplinary project that took up this challenge The aim of this programmatic rethinking was to come up with a general concept of prototyping by combining innovative prototyping concepts which had been researched and developed in three sub projects Hybrid Prototyping developed new prototyping approaches to validate and

evaluate holistically developed systems with their services infrastructure and business models Blended Prototyping addressed a new technique whereby prototypes for user interfaces of software applications can be generated from hand drawings and immediately be tested Beyond Prototyping examined the issue of the prototype in connection with algorithmically generated design for producing tailor made products Intelligent Infrastructure Nastaran Dadashi,David Golightly,Sarah Sharples,Richard Bye,2023-07-30 With the development of sensor technology wireless communications big data and machine learning there is an increasing interest in technologies and solutions that assess and predict the state of equipment and assets within various industrial settings These technologies aim to collect information from multiple sources about infrastructure asset status Then through current and historical data analysis this configuration of technologies delivers intelligence on current and future asset status to a maintenance operator or manager to inform optimal maintenance decision making These technologies are known under different terms remote condition monitoring e maintenance prognostic systems predictive maintenance and smart or intelligent infrastructure Despite the promise of remote condition monitoring and predictive technologies there is a growing concern with such technologies because they can be difficult or impractical to use Understanding and mitigating potential human factors issues could ensure that such vast investments are not wasted This book considers in depth the challenges placed on users of current and future condition monitoring systems Its primary focus is to understand the cognitive processes including managing alarms interpreting data and collaborating with automation The book describes a range of human factors methods that can be used to understand the current and future functioning of people and technology in an enhanced maintenance and asset monitoring context The book also presents a framework for describing these issues systematically and presents the resulting design considerations to increase the effectiveness of individual operators and organisations as a whole **Trust-Based Communication Systems for Internet of Things Applications**
