Advances in Nitrate Therapy Adam Schneeweiss, Marija Weiss, 2012-12-06 Nitrates have been for many years the cornerstone of cardiovascular therapy for various indications Not only have nitrates stood the test of time for treatment of chronic stable angina pectoris but the indications for them have markedly expanded They now include all forms of angina

pectoris and myocardial ischemia congestive heart failure and hypertensive emergencies The beneficial effects of nitrates in all these conditions result from their vasodilatory properties but it is still unclear whether the central or peripheral effects predominate in the therapeutic mechanism Recently nitrates have been shown to fulfill the most important requirement for each and every drug to reduce mortality A large scale study revealed that isosorbide dinitrate combined with hydralazine reduced long term mortality by 28% in patients with congestive heart failure This finding will certainly stimulate research on nitrates and it might be expected that interest in these drugs will markedly increase The primarily used nitrates in clinical practice are nitroglycerin and the complex organic nitrates mainly isosorbide dinitrate The organic mononitrates are now under clinical investigation and isosorbide 5 mononitrate IS 5 MN appears to be especially promising **Medical Therapy of Ischemic Heart Disease** Jonathan Abrams, Carl J.
