Creative Evolution Henri Bergson,2022-12-01 First published in French in 1907 Henri

Bergson s L volution cr atrice is a scintillating and radical work by one of the great French philosophers of the nineteenth and twentieth centuries This outstanding new translation the first for over a hundred years brings one of Bergson s most

important and ambitious works to a new generation of readers A sympathetic though critical reader of Darwin Bergson argues in *Creative Evolution* against a mechanistic reductionist view of evolution For Bergson all life emerges from a creative shared impulse which he famously terms *lan vital* and which passes like a current through different organisms and generations over time Whilst this impulse remains as forms of life diverge and multiply human life is characterized by a distinctive form of consciousness or intellect Yet as Bergson brilliantly shows the intellect's fragmentary and action oriented nature which he likens to the cinematograph means it alone cannot grasp nature's creativity and invention over time A major task of *Creative Evolution* is to reconcile these two elements For Bergson the answer famously lies in intuition which brings instinct and intellect together and takes us into the very interior of life A work of great rigour and imaginative richness that contributed to Bergson winning the Nobel Prize for Literature in 1927 *Creative Evolution* played an important and controversial role in the trajectory of twentieth century philosophy and continues to create significant discussion and debate The philosopher and psychologist William James who admired Bergson's work was writing an introduction to the first English translation of the book before his death in 1910 This new translation includes a foreword by Elizabeth Grosz and a helpful translator's introduction by Donald Landes Also translated for the first time are additional notes articles reviews and letters on the reception of *Creative Evolution* in biology mathematics and theology This edition includes fascinating commentaries by philosophers Maurice Merleau Ponty Georges Canguilhem and Gilles Deleuze [Le Correspondant](#), 1872

Darwin est sans contredit la théorie scientifique la plus marquante de l'histoire des sciences de la vie. Elle a radicalement renversé les idées jusque-là admises sur l'origine de la vie et son évolution. Toutefois, le principe de la survivance du plus apte, de la victoire du fort sur le faible, a conduit à l'émergence des enjeux de classes et de races. Le principe de cette lutte farouche et bestiale a longtemps servi à justifier la colonisation et l'esclavage ou encore à légitimer les campagnes successives de stérilisation massive des pauvres et des inaptes, les génocides et les ethnocides des peuples, et ce uniquement au nom de leur soi-disant infériorité raciale. C'est en tenant compte de cette perspective que l'auteur propose un bilan critique de l'histoire des idées sur l'origine de la vie centré autour de la théorie évolutionniste de Darwin. Son livre se montre essentiel, la compréhension et surtout la démythification des théories et idéologies pseudoscientifiques de racialisation des différences phénotypiques qui structurent la diversité des sociétés humaines.

La Revue scientifique, 1887 *Charles Darwin's Incomplete Revolution* Richard G. Delisle, 2019-06-28

This book offers a thorough reanalysis of Charles Darwin's *Origin of Species* which for many people represents the work that alone gave rise to evolutionism. Of course, scholars today know better than that. Yet few resist the temptation of turning to the *Origin* in order to support it or reject it in light of their own work. Apparently, Darwin fills the mythical role of a founding figure that must either be invoked or repudiated. The book is an invitation to move beyond what is currently expected of Darwin's magnum opus. Once the rhetorical varnish of Darwin's discourses is removed, one discovers a work of remarkably indecisive conclusions. The book comprises two main theses: 1. The *Origin of Species* never remotely achieved the theoretical unity to which it is often credited. Rather, Darwin was overwhelmed by a host of phenomena that could not fit into his narrow conceptual framework. 2. In the *Origin of Species*, Darwin failed at completing the full conversion to evolutionism. Carrying many ill-designed intellectual tools of the 17th and 18th centuries, Darwin merely promoted a special brand of evolutionism, one that prevented him from taking the decisive steps toward an open and modern evolutionism. It makes an interesting read for biologists, historians, and philosophers alike.
