Библиография Югославии ,1981    Análisis de fallos en sistemas aeronáuticos DE SANTIS , AUGUSTO

JAVIER, 2015-01-01 *Análisis de fallos en sistemas aeronáuticos* es un libro cuya génesis es la investigación del aspecto técnico de la industria aeroespacial con una perspectiva interdisciplinaria y una visión integral de aporte a la seguridad operacional. Se trata de una obra de utilidad para todos los sectores y especialidades de la actividad aeronáutica. Los contenidos y el análisis son de interés en la seguridad operacional tanto de los operadores comerciales como de la aviación general o las organizaciones militares con medios a reos. A través de los avances técnicos y la investigación de accidentes y sucesos inseguros la industria ha logrado incrementar los niveles de seguridad con ese criterio está estructurada la obra. Desde los primeros contactos del hombre con los fallos de sus rudimentarias herramientas hasta los complejos materiales compuestos que hoy utiliza la industria aeroespacial esta obra contempla el amplio espectro de materias primas, propiedades intrínsecas, comportamiento técnico y propensión a fallos a través de una visión y un análisis interdisciplinario y sistemático. El texto está estructurado de modo que el lector pueda utilizar este libro como lectura técnica o como manual de consulta sobre temas específicos. La cronología de los temas se ha desarrollado desde un marco histórico evolutivo partiendo desde las materias primas y las técnicas de fabricación los conceptos de estructuras aeronáuticas, la mecánica de fractura, el análisis de fallos con y sin fractura, la mecánica de fatiga, los protocolos de análisis e investigación internacionales, los factores humanos y organizacionales en el área técnica hasta un compendio de casos típicos que posibilita la fácil comprensión de conceptos abstractos. La obra se estructura en 13 capítulos desarrollados con un enfoque académico, rico en un marco histórico referencial y procesos de comprobación analítica. De igual modo en todos los casos y capítulos se han utilizado datos imgenes y gráficos obtenidos de investigaciones reales de fallos en servicio en la industria aeronáutica. Asimismo el libro se nutre de gran cantidad de información obtenida durante el proceso de investigación técnica y detección de fallos en accidentes e incidentes de aviación. Como se indicaba anteriormente la obra en su conjunto presenta una marcada visión sistemática cuyo objetivo es hallar las causas profundas de los fallos y las condiciones latentes presentes en el sistema que propician los accidentes e incidentes. El autor investigador técnico de accidentes de aviación lleva más de 15 años dedicado al estudio de la seguridad operacional desde el ámbito técnico por lo que ha participado en la investigación de accidentes de aviación de transporte aviación general y aviación deportiva. Actualmente desempeña su labor profesional en la autoridad aeronáutica de la

República Argentina como director nacional de investigaciones También ha sido docente de temas técnicos específicos de investigación y es autor de otros trabajos y obras relacionados con este ámbito
