HIDDEN MESSAGES in Classic Batik Patterns Oetari Siswomihardjo-Prawirohardjo, 2025-07-01 Batik in Indonesia has experienced remarkable growth emerging as a valued commodity from a profound artistic tradition rich in spiritual values Through intricate symbols beautifully woven into a piece of batik our ancestors the original creators of these classic patterns conveyed hidden messages and life lessons to future generations This makes the classic batik designs not only aesthetically appealing but also profoundly meaningful However it is unfortunate that the development of batik has not been entirely comprehensive There is a growing concern that the younger generation lacks a deep understanding of these spiritual values inherent in these patterns The knowledge of the symbolic meanings behind classic batik patterns is not being adequately passed down to the present generation It is hoped that the explanations in this book to some extent can help pass down the spiritual values of classic batik particularly to future generations *The River's Edge , Benchtop Pattern Manual* Steve Goodroe, 2017-02-09 The River s Edge Bench Top Fly Pattern Manual is a collection of 81 original fly patterns and streamside observations Written with the avid fly tier and fly fisher in mind Included with every pattern is real world advice on when where and how to use each fly All in a straight forward easy to use format that will be familiar to every fly tier

Patterns Armin Nassehi, 2024-04-26 We are inclined to assume that digital technologies have suddenly revolutionized everything including our relationships our forms of work and leisure and even our democracies in just a few years Armin Nassehi puts forward a new theory of digital society that turns this assumption on its head Rather than treating digital technologies as an independent causal force that is transforming social life he asks what problem does digitalization solve When we pose the question in this way we can see argues Nassehi that digitalization helps societies to deal with and reduce complexity by using coded numbers to process information We can also see that modern societies had a digital structure long before computer technologies were developed already in the nineteenth century for example statistical pattern recognition technologies were being used in functionally differentiated societies in order to recognize monitor and control forms of human behaviour Digital technologies were so successful in such a short period of time and were able to penetrate so many areas of society so quickly precisely because of a pre existing sensitivity that prepared modern societies for digital development This highly original book lays the foundations for a theory of the digital society that will be of value to everyone interested in the growing presence of digital technologies in our lives

Bolton,2003-08-02 The collation of large electronic databases of scientific and commercial information has led to a dramatic growth of interest in methods for discovering structures in such databases These methods often go under the general name of data mining One important subdiscipline within data mining is concerned with the identification and detection of anomalous interesting unusual or valuable records or groups of records which we call patterns Familiar examples are the detection of fraud in credit card transactions of particular coincident purchases in supermarket transactions of important nucleotide sequences in gene sequence analysis and of characteristic traces in EEG records Tools for the detection of such patterns have been developed within the data mining community but also within other research communities typically without an awareness that the same problem was common to many disciplines This is not unreasonable each of these disciplines has a large literature of its own and a literature which is growing rapidly Keeping up with any one of these is difficult enough let alone keeping up with others as well which may in any case be couched in a familiar technical language But of course this means that opportunities are being lost discoveries relating to the common problem made in one area are not transferred to the other area and breakthroughs and problem solutions are being rediscovered or not discovered for a long time meaning that effort is being wasted and opportunities may be lost **Mechanics' Magazine** ,1836 [The Mechanics' Magazine,](#)
