Manual of Bone Densitometry

Measurements John N. Fordham,2012-12-06 The importance of osteoporosis in the United Kingdom as a cause of death and disability is now well recognised There are in excess of 200 000 osteoporotic related fractures in the UK per annum associated with an estimated cost of 942 000 000 Following hip fracture it is known that about 50% of patients are unable to live independently and about 20% of such patients die within the first 6 months These figures compelling as they are reflect poorly on current medical practices which manifestly have failed to identify patients with low bone density at risk of fracture The hope is that the technical advances which have enabled bone mineral density and other allied indices to be measured with high precision and accuracy offers the chance of identifying patients at risk of fracture and guiding the clinician to make treatment decisions which may reduce the patients risk of fracture In the UK services for identifying patients at risk of fracture are still in their infancy and are not uniformly available throughout the country This situation is however likely to improve particularly following the publication of the Royal College of Physicians report Osteoporosis clinical guidelines for prevention and treatment and the recognition in Our Healthier Nation that osteoporosis prevention should be included as a target to achieve a reduction of 20% in accidents by 2010

Free-surface Turbulence and Air-water Gas Exchange Sean Patrick McKenna,2000 This thesis investigates the physical mechanisms of air water gas transfer through direct measurements of turbulence at the air water interface To enable this study a new approach to the particle image velocimetry PIV technique is developed in order to quantify free surface flows PIV measurements of free surface turbulence are performed with concurrent measurements of gas transfer in a specially constructed oscillating grid stirred tank for a range of turbulent mixing and surface conditions Surface turbulence vorticity divergence and gas transfer are all affected by the presence of a surface film with significant effects realized for relatively small surface pressures Results show that while a relationship between surface turbulence and the gas transfer velocity is an obvious improvement over that found using an estimate of the bulk flow turbulence this relationship is dependent on the flow regime However the data from the grid turbulence experiments and additional data from experiments with waves can be reconciled by a single relationship between the gas transfer velocity and the 1/2 power of the surface divergence which agrees with previous conceptual models These results demonstrate the important role of surface divergence in air water gas exchange and relate in a physically meaningful way the interactions between surface renewal surfactants and gas transfer

Biological Sampling in the Deep Sea Malcolm R. Clark,Mireille Consalvey,Ashley A. Rowden,2016-03-16 The deep sea covers over 60% of the surface of the earth yet less than 1% has been scientifically investigated There is growing pressure on deep sea resources and on researchers to deliver information on biodiversity and the effects of human impacts on deep sea ecosystems Although scientific knowledge has increased rapidly in recent decades there exist large gaps in global sampling coverage of the deep sea and major efforts continue to be directed into offshore research Biological Sampling in the Deep Sea represents the first comprehensive compilation of deep sea sampling methodologies for a range of habitats It reviews the real life applications of current and in some instances developing deep sea sampling tools and techniques In creating this

book the authors have been able to draw upon the experiences of those at the coal face of deep sea sampling expanding on the existing methodological texts whilst encompassing a level of technical detail often omitted from journal publications. Ultimately the book will promote international consistency in sampling approaches and data collection, advance the integration of information into global databases and facilitate improved data analyses and consequently uptake of science results for the management and conservation of the deep sea environment. The book will appeal to a range of readers including students, early career through to seasoned researchers as well as environmental managers and policy makers wishing to understand how the deep sea is sampled, the challenges associated with deep survey work and the type of information that can be obtained.
