BESII

No significant narrow strong enhancement near threshold ($\sim 2\sigma$ if fitted with $X(1860)$)

BESIII preliminary

No significant narrow threshold enhancement

Pure FSI interpretation of the narrow and strong $p\bar{p}$ threshold enhancement is disfavored. Other possibilities: conventional meson, $p\bar{p}$ bound state or glueball.....?

Bayesian Network Modeling of Corrosion Narasi Sridhar, 2024-06-29 This book represents a compilation of experience from a slate of experts involved in developing and deploying Bayesian Networks BN for corrosion management The contributors describe how probability distributions can be developed for corroding systems and BN can be applied as an ideal framework to deal with corrosion risk Corrosion can develop suddenly and grow rapidly after a long incubation period and take many non uniform aspects including pitting and stress corrosion cracking that cannot be mitigated by simply bulking up the system They also describe how complex engineering structures and systems are influenced by many natural and engineering factors that come together in myriad ways It provides a broad perspective to the reader on the potential of BN as an artificial intelligence tool for corrosion risk management and the challenges for implementing it

Principles of Soilscape and Landscape Evolution Garry Willgoose, 2018-03-01 Computational models are invaluable in understanding the complex effects of physical processes and environmental factors which interact to influence landform evolution of geologic time scales This book provides a holistic guide to the construction of numerical models to explain the co evolution of landforms soil vegetation and tectonics and describes how the geomorphology observable today has been formed It explains the science of the physical processes and the mechanics of how to solve them providing a useful resource for graduates studying geomorphology and sedimentary and erosion processes It also emphasises the methods for assessing the relative importance of different factors at field sites enabling researchers to select the appropriate processes to model Integrating a discussion of the fundamental processes with mathematical formulations it guides the reader in understanding which processes are important and why and creates a framework through which to study the interaction of soils vegetation and landforms over time
