- Always set the VOLUME control to "0" when plugging in or unplugging the connection cable.
- The battery check indicator (BATT.) will light briefly when a plug is inserted or removed from the output jack. This is normal and does not indicate a malfunction.

NOMENCLATURE

THE CONTROLS

- VOL. (Volume) Control**
Adjusts the overall output volume level.
* Make sure the volume knob is turned to "0" before connecting or disconnecting.
- BATE. (Battery Check) Indicator**
When battery power is low, this indicator will light. As battery power becomes further depleted, the red color will intensify. Please replace the battery with a fresh one as soon as possible.
- Equalizer Controls for the Bar Sensor (Piano)**
LOV : Controls only the level of the low frequencies.
MID : Controls only the level of the middle frequencies. The AMP control adjusts the control frequency of the band affected by this control.
HIGH : Controls only the level of the high frequencies.
- AMP Control**
Sets the center frequency of the band of frequencies affected by the MID equalizer control. This range is from 80Hz to 6 kHz.
- MIC. VOL.**
Controls the volume of the condenser mic. that is located inside the body. On the back of the preamplifier.
- Setting the volume of the high pass or low pass filter**
When the volume of the high pass or low pass filter is set to 0, the MIC. VOL. control will be disabled. When the volume of the high pass or low pass filter is set to 1, the MIC. VOL. control will be enabled.
- MIC. TONE**
Adjusts the tone quality of the condenser mic. Rotate the knob to the LOV side to increase emphasis on low frequencies or to the HIGH side to increase emphasis on high frequencies.
- PHASE switch for the MIC.**
Using this switch will change the tone whenever the mic. signal is added to the guitar's tone. It can be effectively used to control feedback depending upon the device that are used with the settings. Use it as you like.

USING THE SOUND HOLE COVER

Feedback often occurs when controls are located on the electric-acoustic guitar to match the volume of the instrument when playing in silence. Another source of feedback results from using the MIC. VOL. controls to increase the output from the internal condenser mic.

When the instrument is used under the conditions described above, the Sound Hole Cover (Accessory) inserted into the sound hole.

With the Sound Hole Cover in place, feedback is effectively reduced.

CONDENSER MIC. ADJUSTMENT

The condenser mic. is attached inside the body (on the preamplifier) with a flexible peg that allows free adjustment of the mic's direction. A variety of tone variations are achievable by changing the position of the mic head.

- When the guitar was shipped from the factory, the mic head is positioned so that the body slightly points to towards the sound hole and about 10mm from the guitar's top. You can see it from the sound hole. This setting is good for picking up the sound of the strings being played. (See diagram 1.)
- When the mic head is slightly pointing toward the inside of the body this setting will pick up a stronger body sound. (See diagram 2.)
