

Phases of the Moon

The Moon doesn't have light of its own. We see it shining at night because it reflects the light from the Sun. The half of the Moon turned towards the Sun is always lit up. However, on different nights we see different portions of the moon shining. This happens because the Moon rotates around the Earth. The part of the moon we see shining is called a phase of the moon.

Study the picture and learn the names of the moon phases.
