

Yellow composites – things that look a bit like a dandelion

HAWK'S-BEARDS, SOW-THISTLES, CAT'S-EARS AND OXTONGUES

Most botanists are reasonably confident that they can identify a dandelion – even if they don't appreciate just how many species of dandelions there are. However, for many of us this confidence can be shattered when we look in a wildflower guide and discover that there are lots of other yellow-flowered things that look a bit like a dandelion. These lookalikes can be challenging to identify. They include members of several closely related groups, many of them common, some of them less so. This is an informally defined group of species, but here you will find all the yellow composites with flowerheads similar in form and size to dandelions.

WHY IS THIS GROUP OF PLANTS COMPLEX?

The good news is that not all these yellow-flowered Dandelion-like things are complex or difficult to identify. So, with a few tips you are likely to make rapid progress.

Perhaps what makes these plants daunting is the fact that they are all very similar shades of yellow. Plants with pink, purple and mauve flowers all seem to be different shades. In contrast, to human eyes, yellow-flowered species can all appear remarkably similar. This may be a function of the stability of the biochemistry of yellow pigments, or of our eyes' inability to detect colour variation in this part of the spectrum.

Part of the frustration in identifying these species is simply the number of possible alternatives you need to compare, and their unhelpful common names which seem obsessed with hawks. All these dandelion lookalikes are members of the daisy family, the Asteraceae, which includes about 24,000 species – more than any other plant family on earth. This problem of expansiveness is often overlooked by taxonomists, but it is not trivial.

Finally, one of the groups of Dandelion-like plants, the hawkweeds (*Hieracium* spp.), are genuinely complex. Like the dandelions themselves, the hawkweeds produce seeds asexually. This form of reproduction is always associated with the taxonomic complexity that delights some botanists and confounds others. Many

An Anthropology of Puzzles Marcel Danesi,2020-05-15 An Anthropology of Puzzles argues that the human brain is a puzzling organ which allows humans to literally solve their own problems of existence through puzzle format Noting the presence of puzzles everywhere in everyday life Marcel Danesi looks at puzzles in society since the dawn of history showing how their presence has guided large sections of human history from

discoveries in mathematics to disquisitions in philosophy Danesi examines the cognitive processes that are involved in puzzle making and solving and connects them to the actual physical manifestations of classic puzzles Building on a concept of puzzles as based on Jungian archetypes such as the river crossing image the path metaphor and the journey Danesi suggests this could be one way to understand the public fascination with puzzles As well as drawing on underlying mental archetypes the act of solving puzzles also provides an outlet to move beyond biological evolution and Danesi shows that puzzles could be the product of the same basic neural mechanism that produces language and culture Finally Danesi explores how understanding puzzles can be a new way of understanding our human culture The New York Times Garden Party
