Targeting Maths Judy Tertini,Katy Pike,2004 *Exploring 1-5* Bev Dunbar,2002 Covers over 100 teacher led activities that encourage young children to think mathematically by exploring experimenting and being creative Assessment is built into tasks and each book includes a bank of photocopiable resource sheets linked to activities **Creative Holiday Learning** Timothy Tuck,2005 **Navigating Numeracies** Brian V. Street,Dave Baker,Alison Tomlin,2006-03-14 Abstract This introduction sets the scene for the remainder of the book by considering first the international context of widespread concern about the improvement of numeracy skills This is related to reform movements in the UK the US and other countries aimed at modernising primary elementary school mathematics curricula A detailed account is given of the National Numeracy Strategy in England a systemic government imposed response to concern about standards implemented in 1999 2000 This includes a discussion of the alternative meanings of numeracy An earlier initiative sponsored by a UK charitable trust reacting to concern about primary numeracy was the Leverhulme Numeracy Research Programme This large scale longitudinal study and linked set of case study projects focusing on reasons for low attainment took place during 1997 2002 This book and each other in the same series is based on results of that research The timescale fortuitously enabled the research team to also report on some effects of the systemic reform in the National Numeracy Strategy 1 THE INTERNATIONAL CONTEXT In many countries there are recurring periods of national concern about the low standards of calculation skills shown by children in primary elementary schools Recently these concerns have become more urgent and more political with the publication of international comparisons of mathematical achievement first at secondary and more recently at primary level e g Lapointe Mead et al 1992 Mullis et al 1997 **Early Years Science Education** Mike Watts,Alison Silby,2020-04-28 The educational provision for early years is growing and changing across many parts of the world not least in the UK While this book leans heavily on the mounting literature on early child development in its broadest sense physically emotionally linguistically its central focus lies squarely on the growth of children s scientific thinking and

activities Written by educators this book is based both on formal educational research and professional practice in action The authors describe children s science concept development their curiosity driven exploration emergent ecological literacy their learning through science play the assessment of early learning the role of parents and practitioners within early education contexts and some question the very basis of the science being taught Illustrations and examples of practice are not confined to the UK though the messages to be derived from each chapter have application way beyond the immediate context This book was originally published as a special issue of Early Child Development and Care
