generation telephones and mass transit has been a key technology and a major part of the urban infrastructure since the late nineteenth century But sewage treatment plants are not only a ubiquitous component of the modern city they are also ecosystems a hybrid variety that incorporates elements of both nature and industry and embodies multiple contradictions In *Hybrid Nature* Daniel Schneider offers an environmental history of the biological sewage treatment plant in the United States and England viewing it as an early and influential example of an industrial ecosystem The sewage treatment plant relies on microorganisms and other plants and animals but differs from a natural ecosystem in the extent of human intervention in its creation and management Schneider explores the relationship between society and nature in the industrial ecosystem and the contradictions that define it the naturalization of industry versus the industrialization of nature the public interest versus private patented technology engineers versus bacterial and human labor and purification versus profits in the marketing of sewage fertilizer Schneider also describes biotechnology's direct connections to the history of sewage treatment and how genetic engineering is extending the reaches of the industrial ecosystem to such natural ecosystems as oceans rivers and forests In a conclusion that shows how industrial ecosystems continue to evolve Schneider discusses John Todd's *Living Machine* a natural purification method of sewage treatment as the embodiment of the contradictions of the industrial ecosystem

Benchmarking of Control Strategies for Wastewater Treatment Plants Krist V. Gernaey, Ulf Jeppsson, Peter A. Vanrolleghem, John B. Copp, 2014-09-15

Wastewater treatment plants are large non linear systems subject to large perturbations in wastewater flow rate load and composition Nevertheless these plants have to be operated continuously meeting stricter and stricter regulations Many control strategies have been proposed in the literature for improved and more efficient operation of wastewater treatment plants Unfortunately their evaluation and comparison either practical or based on simulation is difficult This is partly due to the variability of the influent to the complexity of the biological and biochemical phenomena and to the large range of time constants from a few minutes to several days The lack of standard evaluation criteria is also a tremendous disadvantage To really enhance the acceptance of innovative control strategies such an evaluation needs to be based on a rigorous methodology including a simulation model plant layout controllers sensors performance criteria and test procedures i e a complete benchmarking protocol This book is a Scientific and Technical Report produced by the IWA Task Group on Benchmarking of Control Strategies for Wastewater Treatment Plants The goal of the Task Group includes developing models and simulation tools that encompass the most typical unit processes within a wastewater treatment system primary treatment activated sludge sludge treatment etc as well as tools that will enable the evaluation of long term control strategies and monitoring tasks i e automatic detection of sensor and process faults Work on these extensions has been carried out by the Task Group during the past five years and the main results are summarized in Benchmarking of Control Strategies for Wastewater Treatment Plants Besides a description of the final version of the already well known Benchmark Simulation Model no 1 BSM1 the book includes the Benchmark Simulation Model no 1 Long Term BSM1_LT with focus on benchmarking of process monitoring tasks and the plant wide Benchmark Simulation Model no 2 BSM2 Authors Krist V Gernaey Technical University of Denmark Lyngby Denmark Ulf Jeppsson Lund University Sweden Peter A Vanrolleghem Universit Laval Quebec Canada and John B Copp Primodal Inc Hamilton Ontario Canada
