Water In A Changing World Report:

Water in a Changing World World Water Assessment Programme (United Nations), 2009 The United Nations World Water Development Report published every three years is a comprehensive review providing an authoritative picture of the state of the world's freshwater resources. It offers best practices as well as in-depth theoretical analyses to help stimulate ideas and actions for better stewardship in the water sector. It is the only report of its kind resulting from the collaboration and contributions of the 26 UN agencies commissions, program funds, secretariats and conventions that have a significant role in addressing global water concerns. The news media are full of talk of crises in climate change, energy and food and troubled financial markets. These crises are linked to each other and to water resources management. Unresolved, they may lead to increasing political insecurity and conflict. Water is required to meet our fundamental needs and rising living standards and to sustain our planet's fragile ecosystems. Pressures on the resource come from a growing and mobile population, social and cultural change, economic development and technological change. Adding complexity and risk is climate change with impacts on the resource as well as on the sources of pressure on water. The challenges, though substantial, are not insurmountable. The Report shows how some countries have responded. Progress in providing drinking water is heartening with the Millennium Development Goal target on track in most regions. But other areas remain unaddressed and after decades of inaction the problems in water systems are enormous and will worsen if left unattended. Leaders in the water sector can inform decisions outside their domain and manage water resources to achieve agreed socioeconomic objectives and environmental integrity. Leaders in government, the private sector and civil society determine these objectives and allocate human and financial resources to meet them. Recognizing this responsibility, they must act now. Two volume set, 336/96 pages, case studies. Includes CD-ROM. Published jointly with UNESCO Publishing.

The United Nations World Water Development Report - N° 3 - 2009 - Water Adaptation in National Adaptation Programmes for Action (Freshwater in Climate Adaptation Planning and Climate Adaptation in Freshwater Planning), **Negotiating for Water Resources** Andrea Haefner, 2016-10-04 Over 90 per cent of the world population lives in countries that share a river basin with others Freshwater resources are scarce and different

nations actors and users compete for limited resources in transboundary river basins often conflicting with each other Water is a resource with no substitute it cannot be secured in sufficiently large quantities through long distance trade deals and due to the interconnectivity of the hydrological system the actions of one country in its water management have a direct bearing on the interests of neighbouring countries For instance in the Mekong River Basin current hydropower and navigation developments in certain countries impact on traditional sources of income such as fisheries and rice production in others These kinds of changes in water use have given rise to conflict between countries in that region and others but have also led in some cases to greater cooperation The past few decades have seen a number of new agreements about the sharing of river resources and cooperation between riparian states Negotiating for Water Resources explores the drivers of conflict and cooperation between states in transnational river basins Drawing on extensive fieldwork and interviews on the Mekong Danube and La Plata River Basins the book provides a three level analysis across three case studies including the regional framework EU ASEAN and Mercosur the River Basin Organisations ICPDR MRC and CIC and the micro level The key question of the book is To what extent do power asymmetries prevent or inhibit cooperation between riparian states over water resources This is linked to the question of how institutions contribute to mitigate competition for natural resources and how states interact in a multilateral arena Overall the book argues that cooperation in transboundary river basins is possible even where there are asymmetric power relations challenging realist assumptions about competition and conflict over resources
