

The Water Cycle

Evaporation

The sun's warmth turns water from oceans, lakes, streams, ice and soils into a gas called water vapor, which rises into the air.

Collection

The water that falls is stored in the oceans, rivers, lakes and streams. When it falls on the land, it infiltrates the earth and becomes groundwater.

Condensation

Water vapor in the air cools down, changes back into liquid water and forms clouds.

Precipitation

Clouds get full and heavy and the water falls back to the earth under the form of rain, snow, hail or sleet.
