

Worksheet - Wave Properties and Math

1. To make a wavelength of rope shorter, one should shake the rope at a higher (higher or lower) frequency.
2. The primary difference between an electromagnetic wave and a mechanical wave is that a(n) electromagnetic wave can travel through empty space, while the other cannot.
3. Waves carry energy but does not carry the medium with it.
4. The energy of a wave depends on its amplitude.
5. In a transverse wave, the medium vibrates up and down as the wave moves horizontally. In a longitudinal wave, the medium moves back and forth as the wave moves horizontally.
6. The speed of a wave depends on the medium. It can be calculated by multiplying frequency X wavelength.
7. Wave frequency (frequency or velocity) is the number of vibrations per second of a part of the medium.
8. As the wavelength of a wave increases, the frequency of the wave decreases.
9. The frequency of a certain color of light is 4.2×10^{14} Hz. The speed of light is 3.0×10^8 m/s. Find its wavelength.

$$\begin{aligned} v &= f \lambda \\ 3.0 \times 10^8 \text{ m/s} &= 4.2 \times 10^{14} \text{ Hz} \times \lambda \\ \lambda &= 7.1 \times 10^{-7} \text{ m} \end{aligned}$$

10. A wave has a period of 12.0 s. The distance between a crest and the adjacent trough is 2.00 m.
 - a. What is the frequency? $f = 1/T$ $F = 1/12.0$ $f = 0.083 \text{ Hz}$
 - b. What is the wavelength? $2.00 \times 2 = 4.00 \text{ m}$
 - c. What is the velocity? $v = f \lambda$ $v = 0.083 \times 4.00$ $v = 0.33 \text{ m/s}$

This book captures the excitement of a formative phase of UK science during and immediately following WWII. It links back to scientists working at Antarctic whaling stations and the complimentary voyages of Captain Scott's Discovery that explored the vast icy Southern Ocean funded by a tax on whale oil. In the depths of WWII a small group of young scientists were brought together under the inspirational leadership of Dr later Sir George Deacon and shortly after the end of the war the UK's first National Institute of Oceanography was formed. The discoveries from 50 years ago underpin our modern day science. The book's chapters are all written and edited by NIO scientists and convey the atmosphere of work at sea in a bygone age before small computers, satellite navigation and easy communication. The book is a useful introduction for students of marine and or environmental science. It will appeal to many scientists and the general public to those interested in science and innovation during and after WWII and of course to many living in the Surrey who always wondered what went on in the leafy lanes that were home to NIO and its successors for almost 50 years. **National Bureau of Standards**
