Waves And Mean Flows Oliver Bühler:

Waves and Mean Flows Oliver Bühler, 2009-08-20 Interactions between waves and mean flows play a crucial role in understanding the long term aspects of atmospheric and oceanographic modelling. Indeed our ability to predict climate change hinges on our ability to model waves accurately. This book gives a modern account of the nonlinear interactions between waves and mean flows such as shear flows and vortices. A detailed account of the theory of linear dispersive waves in moving media is followed by a thorough introduction to classical wave mean interaction theory. The author then extends the scope of the classical theory and lifts its restriction to zonally symmetric mean flows. The book is a fundamental reference for graduate students and researchers in fluid mechanics and can be used as a text for advanced courses. It will also be appreciated by geophysicists and physicists who need an introduction to this important area in fundamental fluid dynamics and atmosphere ocean science.

Nonlinear Waves in Fluids: Recent Advances and Modern Applications Roger Grimshaw, 2007-03-23 Although nonlinear waves occur in nearly all branches of physics and engineering there is an amazing degree of agreement about the fundamental concepts and the basic paradigms. The underlying unity of the theory for linearized waves is already well established with the importance of such universal concepts as group velocity and wave superposition. For nonlinear waves the last few decades have seen the emergence of analogous unifying concepts. The pervasiveness of the soliton concept is amply demonstrated by the ubiquity of such models as the Korteweg de Vries equation and the nonlinear Schrödinger equation. Similarly there is a universality in the study of wave wave interactions whether deterministic or statistical and in the recent developments in the theory of wave mean flow interactions. The aim of this text is to present the basic paradigms of weakly nonlinear waves in fluids. This book is the outcome of a CISM Summer School held at Udine from September 20-24, 2004. Like the lectures given there the text covers asymptotic methods for the derivation of canonical evolution equations such as the Korteweg de Vries and nonlinear Schrödinger equations, descriptions of the basic solution sets of these evolution equations and the most relevant and compelling applications. These themes are interlocked and this will be demonstrated throughout the text. The topics address any fluid flow application but there is a bias towards geophysical fluid dynamics reflecting for the most part the areas where many applications have been found.

Fundamental Aspects of Turbulent Flows in Climate Dynamics Freddy Bouchet, Antoine Venaille, Tapio Schneider, Christophe Salomon, 2020 This book collects the text of the lectures given at the Les Houches Summer School on Fundamental aspects of turbulent flows in climate dynamics held in August 2017. Leading scientists in the fields of climate dynamics, atmosphere and ocean dynamics, geophysical fluid dynamics, physics and nonlinear sciences present their views on this fast growing and

interdisciplinary field of research by venturing upon fundamental problems of atmospheric convection clouds large scale circulation and predictability Climate is controlled by turbulent flows Turbulent motions are responsible for the bulk of the transport of energy momentum and water vapor in the atmosphere which determine the distribution of temperature winds and precipitation on Earth Clouds weather systems and boundary layers in the oceans and atmosphere are manifestations of turbulence in the climate system Because turbulence remains as the great unsolved problem of classical physics we do not have a complete physical theory of climate The aim of this summer school was to survey what is known about how turbulent flows control climate what role they may play in climate change and to outline where progress in this important area can be expected given today's computational and observational capabilities This book reviews the state of the art developments in this field and provides an essential background to future studies All chapters are written from a pedagogical perspective making the book accessible to masters and PhD students and all researchers wishing to enter this field It is complemented by online video of several lectures and seminars recorded during the summer school
