Chapter 15(14) Financial Statement Analysis

OPENING COMMENTS

This chapter presents techniques for analyzing financial statements and the contents of annual reports. The techniques for analyzing financial statements include horizontal analysis, vertical analysis, and ratio analysis. Since an analytical technique has been presented at the end of most chapters, some of the material presented in Chapter 15(14) will be a review. The appendix presents unusual items on the income statement.

When covering this chapter, you should guard against getting bogged down in the calculations surrounding ratio analysis. Try to spend at least as much class time interpreting ratios as calculating them. Emphasize that computing ratios is only the starting point for assessing the performance of a business. To be meaningful, current-year ratios must be compared with ratios from prior years and ratios of other companies in the same industry. The influence of the general economic and business environment should be considered. Finally, sound financial judgment should be applied.

After studying the chapter, your students should be able to:

1. Describe basic financial statement analytical methods.
2. Use financial statement analysis to assess the solvency of a business.
3. Use financial statement analysis to assess the profitability of a business.
4. Describe the contents of corporate annual reports.
