1. Think of and name some water sources that are safe to drink: Tap water, bottled water, water from treated sites (maybe streams, rivers, etc.)
2. Think of and name some water sources that are not safe to drink: Untreated water, sewage/waste water
3. What would be an example of water that would be good for fish, but not safe for humans to drink? An example could be sea water or salt water which a fish may live in for an environment, but is not safe from humans to drink.

1. What is a macroinvertebrate? It is an organism that can be seen with the naked eye (macro) that does not have a backbone since it is an invertebrate.
2. Name a few different habitats in the water that macroinvertebrates live in. They can live in aquatic habitats like moving streams, shallow ponds, bottom of lakes within the soft sediments, etc.
3. How do they indicate pollution? Macroinvertebrates are able to withstand various levels of pollution and stream conditions, so scientists are able to use whether they are within an ecosystem or absent to showcase clean or polluted water.
4. Provide an example: An example from the website showcased how the larvae of organisms like mayflies and stoneflies can not live in water that is polluted, so habitats that have these organisms within it must have good water quality according to the above indication.
5. Describe the five factors that influence macroinvertebrate health (these five factors are often on the AP Exam) Five factors that influence their health include 1) seasons which ties to the food availability of energy sources such as higher algae production in the summer, 2) dissolved oxygen to which macroinvertebrates breathe and require high levels at the immature stage, 3) substrate which is what the bottom of the stream is made of that affects which organisms decide to reside, 4) pH to which low pH levels can weaken shells and exoskeletons that may kill the organisms, 5) nutrient enrichment to which added minerals and nutrients can lead to eutrophication, using up dissolved oxygen that macroinvertebrates rely on.

Explain:

7. Do you think the water quality value for macroinvertebrates applies more for water that is good for aquatic life (such as fish) or safe for drinking? Or both? Explain your thinking: I think it is both as it goes hand in hand with each other. Since some macroinvertebrates won't live in aquatic environments that are polluted, it shows a better water quality value for this area which also may indicate water that may be safe enough for drinking, dependent on how tolerant the organism is. The more non tolerant the organism is with the water quality, the less likely for pollution and the higher probability that the water is more safer for drinking.
