

The above approach, the combined effect of individual and system risk, incorporates uncertainties affecting quality control and quality management, product and process control, and the effectiveness of the existing control system in production of goods, this approach is the objective of the present study.

Environmental stress may be defined as physical temperature, gas, humidity, acidity, and noise that contribute to the development of the human organism. Environmental stress also includes any combination of these factors.

Temperature of a substance is a mathematical measure of whether the substance is abstracted or not. In this sense, the amount of energy that abstracts a substance is proportional to the amount of energy that it has. The amount of energy that a substance has is proportional to the amount of energy that it has. The amount of energy that a substance has is proportional to the amount of energy that it has.
